Rate Formula Template
Using 2017 Projected and Financial Operating Data for Southwest Power Pool Rates
For Rates Effective January 1, 2017
LINCOLN ELECTRIC SYSTEM

Blue cells are data entry points. However, non-blue cells are not protected so care is needed. All blue cell entries will be forecasts of forward test year amounts. True-up adjustments will be based on the difference between actual and forecast net ATRR for previous test year.

Table of Contents

Worksheet Name	Description
Page 1	Derivation of PTP Rates
Page 2	Derivation of Projected Net ATRR
Page 3	Allocator Calculations
Page 4	Notes & Comments
A	Account 456 Supporting Schedule
B	Account 454 Supporting Schedule
C	True-Up Worksheet
D	True-Up Page 2 - Derivation of True-Up for Net ATRR
F	Schedule - System Scheduling etc
G	Billing Units Divisor
G1	Historic Year Actual Billing Units for Computing Divisor True Up
H	SPP Transmission Cost Allocation Revenue Offsets
I	Upgrade Fixed Charge Rate
J1	Transmission Upgrade Project #1 Calculations
J2	Transmission Upgrade Project #2 Calculations
K	SPP RTO Incentive Adder
L	Transmission Plant Used for Other Purposes (for internal use only)

Decision Variables

Switch for use of General Plant vs Net Plant Allocator for Debt Service — Choice: 1 = GP; 0 = NP: 0

Switch for use of Incentive Plant (column K) in Worksheets J1 and J2 to feed page 1, Line 8, Transmission Revenue Offset — Choice: 1 = No Incentive Plant; 0 = Incentive Plant: 1

Forecast Year: 2017

ROE Transmission Investment Incentive Adder (basis points): — Choice: 1 = Incentive Adder Granted by FERC; 0 Adder not Granted by FERC: 0

RTO Incentive Adder — Choice: 1 = RTO Incentive Adder Granted by FERC; 0 RTO Incentive Adder not Granted by FERC: 1

Formula Rate - Cash Flow

General Note: References to pages in this formulary rate are indicated as: (page#, line#, col.#)
References to data are to FERC account numbers

Note Letter				
New				
A	The revenues credited on page 1 line 2 include a) amounts received directly from the SPP for Point-to-Point transmission service where the demand is not included in the divisor; b) amounts from customers taking service under grandfathered agreements where the demand is not included in the rate divisor; and c) imputed revenues related to short-term reservations of LES's merchant function. Revenue associated with Federal Regulatory Commission annual charges, gross receipts taxes, ancillary services and facilities excluded from the Transmission Cost of Service are not incuded as revenue credits. Revenue from transmission customers whose coincident peak loads are included in the divisor of the load-ratio share calculation are not included as revenue credits. See Worksheet A for details.			
B	Includes income related only to transmission facilities, such as pole attachments, rentals and special use. See Worksheet B for details.			
C	Calculation of Prior Year Divisor True-Up			
	Historic Year Actual Divisor	Pg C, line 1	694,583	kW
	Projected Year Divisor	Pg C, line 2	687,333	kW
	Difference between Historic & Projected Year Divisors		7,250	kW
	Prior Year Projected Annual Cost ($ per kw per year)		$34.49	
	Projected Year Divisor True-Up (Line 3 x Line 4)		$250,061.78	
D	The FERC's annual charges for the year assessed the Transmission Owner for service under this tariff, if any.			
F	System control and load dispatch costs.			
G1	The utility's maximum monthly megawatt load (60-minute integration) for RQ service at time of ISO coincident monthly peaks. RQ service is service that the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning).			
G2	Includes LF, IF, LU, IU service. LF means "firm service" (cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions), and long-term (duration of at least five years); does not meet definition of RQ service. IF is "firm service" for a term longer than one but less than five years. LU is service from a designated generating unit, of a term no less than five years. LI is service from a designated generating unit for a term between one and five years. Measured at time of ISO coincident monthly peaks.			
G3	LF as defined above at time of ISO coincident monthly peaks.			
G4	LF as defined above at time of ISO coincident monthly peaks.			
G5	Grandfathered agreements whose rates have been changed to eliminate or mitigate pancaking - the revenues are included in line 4 page 1 and the loads are included in line 13, page 1. Grandfathered agreements whose rates have not been changed to eliminate or mitigate pancaking - the revenues are not included in line 4, page 1 nor are the loads included in line 13, page 1.			
I	Line 5 - EPRI Annual Membership Dues, all Regulatory Commission Expenses, and non-safety related advertising. Line 5a - Regulatory Commission Expenses directly related to transmission service, ISO filings, or transmission siting.			
K	The FERC, in Order Nos. 679 and 679-A, offers a 50-basis point incentive adder for transmission owners joining an RTO as long as the return on equity for the transmission owner is within a zone of reasonableness. In order to be comparable with transmission owners in RTOs (including SPP), LES has included this 50-basis-point incentive adder in its revenue requirements.			
L	Removes transmission plant determined by Commission order to be state-jurisdictional according to the seven-factor test (until RUS 12 balances are adjusted to reflect application of seven-factor test).			
M	The Margin Requirement is the margin the utility uses in calculating rates applicable to its native load sales. The Margin Requirement as a percent of interest expense yields a TIER (times interest earned ratio), and the Margin Requirement as a percent of debt service is the DSR (debt service ratio), either of which may be referred to as a Margin Ratio (MR). Some utilities have MRs required by bond covenants and/or MRs that include expenses additional to interest or debt service (for example, an MR equal to a percentage of the sum of DS+O&M). The ISO will review such party's filings to assure that the MRs are consistent with those applicable to native load or required by bond covenants and utility must provide workpapers showing derivation of margin.			
N	Removes dollar amount of transmission expenses included in the OATT ancillary services rates, including all of Account No. 561.			
O	Removes dollar amount of transmission plant included in the development of OATT ancillary services rates and generation step-up facilities, which are deemed to included in OATT ancillary services. For these purposes, generation step-up facilities are those facilities at a generator substation on which there is no through-flow when the generator is shut down.			
P	If the utility has more employees assigned to A&G than to the sum of production, transmission, and distribution, set the W&S allocator at page 3, line 37 equal to the gross plant allocator (GP) at page 3, line 7.			
Q	Enter dollar amounts.			
R	Line 45 must equal zero since all short-term power sales must be unbundled and the transmission component reflected in Account No. 456 and all other uses are to be included in the divisor.			
U	Includes only FICA, unemployment, highway, property, gross receipts, and other assessments charged in the current year. Taxes related to income are excluded. Gross receipts taxes are not included in transmission revenue requirement in the Rate Formula Template, since they are recovered elsewhere.			
V	Additional revenue requirement for facilities receiving incentives. See worksheets I, J, and K			
W	FERC 565 on page 2 includes STEP BPF, STEP HWBW, CWIP, Balanced Portfolio Projects, Balanced Portfolio Transfers, and Priority Projects associated with the Southwest Power Pool. These costs are excluded from the ATRR because they are not funded by transmission rates.

Worksheet J2 - LES Transission Upgrade (TU) Project #2

Facilities receiving incentives accepted by FERC in Docket No.

Line No.	**Project Description:**				
1	Investment	$0	Current Year		2017
2	Service Year (yyyy)	2013	Incentive ROE increase (Basis Points)	0	0.00%
3	Service Month (1-12)	1	FCR w/o incentives, less depreciation		8.62%
4	Useful life (Yrs)	30	FCR w/ incentives approved for these facilities, less dep		8.62%
5	CIAC (Yes or No)	No	Annual Depreciation Expense		$0

	Investment Year	Year #	Beginning Balance	Depreciation Expense	Ending Balance	TU Rev Req w/o Incentives	TU Rev Req w/ Incentives	Additional ATRR for Incentives on TU Projects
6	2013	1	$0	$0	$0	$0	$0	$0
7	2014	2	$0	$0	$0	$0	$0	$0
8	2015	3	$0	$0	$0	$0	$0	$0

Worksheet K - SPP RTO Incentive Adder

Line No	Description	Amount	Equity %	
	Calculate Premium for Joining an RTO			
	(Plant based on 2017 data)			
1	Transmission Plant	$229,584,914		
2	Allocated Share of General	$12,284,255		
3	Total Plant	$241,869,169		
4	X Equity Ratio	31%		
5	X 50 Basis Point Premium	0.0050		
	Premium $	$374,897		
	Calculate Equity %			
	(Based on 2015 Balance Sheet)			
6	Total Debt	$714,000,000	69%	
7	Equity	$320,034,460	31%	See Financial Services
8	Total	$1,034,034,460

Notes Section of Page 3 Line 21 does not make reference to Worksheet L, only a reference to Note L.

Worksheet L - Transmission Plant Used for Other Purposes

Note: To compute net transmission plant for individual lines (e.g., Walter Scott #4) I computed the ratio of Total Net Plant to Total Gross Plant, and multiplied each Gross plant line by that value.

Line No.	Description	Gross	Net	48.6519% Additional Description
1	**Walter Scott #4**	$ 24,646,237	$ 19,335,954	
2	**LRS**	$ 25,493,501	$ 2,223,562	
3	**LRS - Ault Sub**	$ 535,213	$ -	
4	**Radial Line**	$ 377,847	$ 56,915	20th & Pioneer to 29th & Leighton
5		$ -	$ -	14th & Alvo to NW 12th & Arbor Rd. (no longer radial)
6		$ -	$ -	
7		$ -	$ -	
8		$ -	$ -	
5	**Total**	$ 51,052,798	$ 21,616,431	

Note: Various Plant Transmission Lines that are excluded from ISO. See Financial Accounting
