Executive Summary

Coral Power, LLC has requested a system impact study for transmission service from a merchant plant in Rusk County, Texas. Transmission service for 450 MW has been requested from June 1, 2001 to May 31, 2004, with the OASIS request # 121839 from Central and South West (CSW) to Entergy.

The principal objective of this study is to identify system problems and potential system modifications necessary to facilitate the 450 MW transfer while maintaining system reliability and stability.

The analysis in this document shows that to accommodate a 450 MW transfer, upgrades will be required on the CSW 138 kV and 115 kV transmission systems. These upgrades include reconductoring a 138 kV transmission line and replacing a 115 kV switch. The total estimated cost of these upgrades in 1999 dollars is \$400,000.

The Southwest Power Pool (SPP) and CSW shall use due diligence to add necessary facilities or upgrade the Transmission system to provide the requested transmission service, provided Coral Power, LLC agrees to compensate CSW for such costs pursuant to the terms of section 27 of the SPP Open Access Transmission Tariff. Expedited procedures for new facilities are available to Coral Power, LLC per section 19.8 of the SPP Open Access Transmission Service Tariff.

Engineering and construction of any new facilities or modifications will not start until after a transmission service agreement and/or construction agreement is in place and CSWS receives the appropriate authorization to proceed from the SPP after they receive authorization from the transmission customer.

Introduction

Coral Power, LLC has requested a impact study for transmission service from a merchant plant in Rusk County Texas. Transmission service for 450 MW has been requested from June 1, 2001 to May 31, 2004. The total generation capability of the plant is 900 MW.

The principal objective of this study is to identify the restraints on the system that may limit the transfer to less than 450 MW. This study includes steady-state contingency analysis (PSS/E function ACCC) and Available Transfer Capability (ATC) analysis.

The steady-state analysis considers the impact of an 450 MW transfer on transmission line loading and transmission bus voltages for outages of single and double circuit transmission lines, autotransformers, and generators on the CSW system.

The ATC analysis shows the amount of First Contingency Incremental Transfer Capabilities (FCITC) between given the study systems and what if any the limitations are for transferring up to 450 MW.

Study Methodology

The CSW and SPP criteria state that the following conditions be met in order to maintain a reliable and stable system.

- 1) More probable contingency testing must conclude that
 - a) All facility loadings are within their emergency ratings and all voltages are within their emergency limits (0.90-1.05 per unit) and
 - b) Facility loadings can be returned to their normal limits within four hours
- 2) Less probable contingency testing shall conclude that
 - a) Neither uncontrolled islanding, nor uncontrolled loss of large amounts of load will result.

More probable contingency testing is defined as losing any single piece of equipment or multi-circuit circuit transmission lines. Less probable contingency testing involves the loss of any two critical pieces of equipment such as 345 kV autotransformers and generating units or the loss of critical transmission lines in the same right-of-way.

A 2000 summer peak case, a 2000 winter peak case, a 2003 summer peak case, and a 2003 winter peak case were used to model the transmission network and system loads. Base Southwest Power Pool Cases for 2001 summer and winter peaks and 2004 summer and winter peaks were not available at the time of this study. These cases were modified to reflect expected changes due to be in service by 2001 that were not included in the base cases.

Using the created models and the ACCC function of PSS/E, single and select double contingency outages on the CSW system were analyzed. Shown in table 1 are the outages that caused overloads and the upgrades needed to solve the overloading problems.

The only outage identified was the loss of Entergy's McNeil 500-115 kV autotransformer. This results in an overload of switch #1143 at Patterson on the outgoing 115 kV line to Ashdown REC when 600 MW is being transferred into the SPP over the East DC tie.

Table 1: ACCC Results

Conditions:

- | | |
|-----------------------------------------------------------------------|----------------------------------------|
| 1) 2001 Summer Peak 3) 600 MW coming into SPP over the East DC tie | 2) Rusk County generation on at 450 MW |
|-----------------------------------------------------------------------|----------------------------------------|

| Load flow case description | Overloaded lines/ Buses with low voltage | Solutions |
|---------------------------------------|------------------------------------------|-----------------------------------------|
| McNeil 500-115 kV autotransformer out | Patterson-Ashdown REC | Replace 600 A switch #1143 at Patterson |

See the System Improvement Costs section for the complete list of upgrades required to facilitate the 450 MW transfer.

Available Transfer Capability

ATC study was run using default participation points for Entergy. In other words, the generation was scaled down among all available on-line generators. The purpose of this study was to ensure that the desired power transfer (450 MW) could be accomplished while maintaining system reliability.

Results for the studies are shown in Table 2. The PSS/E TLTG command was used. The TLTG output for all of the cases is attached.

As shown in the table, the amount of First Contingency Incremental Transfer Capability available is 450 MW for all of the seasons studied, except for one case. That case is the 2001 summer peak with the East DC tie bringing 600 MW into the SPP from ERCOT.

The only contingency that caused a problem was the loss of the Wilkes-Longwood 345 kV line. This resulted in an overload of the Jefferson Switching Station to IPC Jefferson 138 kV line during 2001 summer peak. In order to facilitate the 450 MW transfer, the upgrades listed in the System Improvement Costs section will be required.

Table 2: Available Transfer Capability

Tenaska (Rusk County) 450 MW to Entergy

| Case Description | East DC Flow | FCITC | Limiting Constraint | Contingency |
|-----------------------|--------------|-------|-----------------------------------------------------------|------------------------|
| 2001 Summer Peak | 36 to ERCOT | 450 | None | None |
| 2001/2002 Winter Peak | 36 to ERCOT | 450 | None | None |
| 2003 Summer Peak | 36 to ERCOT | 450 | None | None |
| 2003/2004 Winter Peak | 36 to ERCOT | 450 | None | None |
| 2001 Summer Peak | 600 to SPP | 412 | Jefferson Switch-IPC Jefferson 138 kV; 336 ACSR conductor | Wilkes-Longwood 345 kV |
| 2001/2002 Winter Peak | 600 to SPP | 450 | None | None |
| 2003 Summer Peak | 600 to SPP | 450 | None | None |
| 2003/2004 Winter Peak | 600 to SPP | 450 | None | None |
| 2001 Summer Peak | 600 to ERCOT | 450 | None | None |
| 2001/2002 Winter Peak | 600 to ERCOT | 450 | None | None |
| 2003 Summer Peak | 600 to ERCOT | 450 | None | None |
| 2003/2004 Winter Peak | 600 to ERCOT | 450 | None | None |

See the System Improvement Costs section for the complete list of upgrades required to facilitate the 450 MW transfer.

System Improvement Costs

In order to accommodate the requested transfer of 450 MW, the improvements in Table 3 must be made on the CSW system. These improvements and costs correspond with the base case scenario of transferring 450 MW to Entergy.

Table 3: System Improvement Costs

| SYSTEM IMPROVEMENT | COST IN (1999 DOLLARS) |
|-----------------------------------------------------------------------------------------------------------|---------------------------|
| Rebuild reconductor & the Jefferson Switching Station-IPC Jefferson 138 kV line, 1.49 miles, to 795 ACSR. | \$380,000 |
| Replace 600 A switch #1143 at Patterson | \$20,000 |
| TOTAL | \$400,000 |

The estimated time frames for engineering and construction of the projects listed above are:

Line reconductor: 18 Months
Switch replacement: 6 Months

The line reconductor may require a Certificate of Convenience and Necessity (CCN) exemption. Times are for each individual project. No consideration was given to possible outage conflicts during construction, conflicts with construction during the summer peak, engineering and construction manpower constraints, etc. Time frame is based on engineering starting when approval is received to start on the project.
