# Executive Summary

Pursuant to the Southwest Power Pool (SPP) Open Access Transmission Tariff (OATT), SPP has conducted this Definitive Interconnection System Impact Study (DISIS) for certain generation interconnection requests in the SPP Generation Interconnection Queue. These interconnection requests have been clustered together for the following Impact Study. This Impact Re-Study is being performed to account for the withdrawal of higher and equally queued customers. The customers will be referred to in this study as the DISIS-2010-001 Interconnection Customers. This Impact Study analyzes the interconnecting of multiple generation interconnection requests associated with new generation totaling 4,504 MW of new generation which would be located within the transmission systems of American Electric Power West (AEPW), Midwest Energy Inc. (MIDW), Missouri Public Service (MIPU), Mid-Kansas Electric Power LLC (MKEC), Nebraska Public Power District (NPPD), Oklahoma Gas and Electric (OKGE), Southwestern Public Service (SPS), Sunflower Electric Power Corporation (SUNC), Westar Energy (WERE). The various generation interconnection requests have differing proposed in-service dates<sup>1</sup>. The generation interconnection requests included in this DISIS are listed in Appendix A by their queue number, amount, area, requested interconnection point, proposed interconnection point, and the requested in-service date.

Power flow analysis has indicated that for the powerflow cases studied, 4,504 MW of nameplate generation may be interconnected with transmission system reinforcements within the SPP transmission system. Dynamic Stability and power factor analysis has determined the need for reactive compensation in accordance with Order No. 661-A for wind farm interconnection requests and those requirements are listed for each interconnection request within the contents of this report.

Dynamic Stability Analysis has determined that the transmission system will remain stable with the assigned Network Upgrades and necessary reactive compensation requirements.

The total estimated minimum cost for interconnecting the DISIS-2010-001 interconnection customers is \$350,000,000. These costs are shown in Appendices E and F. Interconnection Service to DISIS-2010-001 interconnection customers is also contingent upon higher queued customers paying for certain required network upgrades. The in service date for the DISIS customers will be deferred until the construction of these network upgrades can be completed.

These costs do not include the Interconnection Customer Interconnection Facilities as defined by the SPP Open Access Transmission Tariff (OATT). This cost does not include additional network constraints in the SPP transmission system that were identified as shown in Appendix H.

Network Constraints listed in Appendix H are in the local area of the new generation when this generation is injected throughout the SPP footprint for the Energy Resource (ER) Interconnection Request. Additional Network constraints will have to be verified with a Transmission Service Request (TSR) and associated studies. With a defined source and sink in a TSR, this list of Network Constraints will be refined and expanded to account for all Network Upgrade requirements.

---

<sup>1</sup> The generation interconnection requests in-service dates will need to be deferred based on the required lead time for the Network Upgrades necessary. The Interconnection Customer's that proceed to the Facility Study will be provided a new in-service date based on the completion of the Facility Study.

The required interconnection costs listed in Appendices E and F do not include all costs associated with the deliverability of the energy to final customers. These costs are determined by separate studies if the Customer submits a Transmission Service Request through SPP's Open Access Same Time Information System (OASIS) as required by Attachment Z1 of the SPP OATT.

Based on the SPP Tariff Attachment O, transmission facilities that are part of the SPP Transmission Expansion Plan (STEP) including Sponsored Economic Upgrades or the Balanced Portfolio that are approved by the SPP Board of Directors will receive notifications to construct. These projects will then be considered construction pending projects and would not be assignable to the Impact Cluster Study Generation Interconnection Requests.

## Introduction

Pursuant to the Southwest Power Pool (SPP) Open Access Transmission Tariff (OATT), SPP has conducted this Definitive Interconnection System Impact Study (DISIS) for certain generation interconnection requests in the SPP Generation Interconnection Queue. These interconnection requests have been clustered together for the following Impact Study. The customers will be referred to in this study as the DISIS-2010-001 Interconnection Customers. This Impact Study analyzes the interconnecting of multiple generation interconnection requests associated with new generation totaling 4,504 MW of new generation which would be located within the transmission systems of American Electric Power West (AEPW), Midwest Energy Inc. (MIDW), Missouri Public Service (MIPU), Mid-Kansas Electric Power LLC (MKEC), Nebraska Public Power District (NPPD), Oklahoma Gas and Electric (OKGE), Southwestern Public Service (SPS), Sunflower Electric Power Corporation (SUNC), Westar Energy (WERE). The various generation interconnection requests have differing proposed in-service dates<sup>2</sup>. The generation interconnection requests included in this Impact Cluster Study are listed in Appendix A by their queue number, amount, area, requested interconnection point, proposed interconnection point, and the requested in-service date.

The primary objective of this Definitive Interconnection System Impact Study is to identify the system constraints associated with connecting the generation to the area transmission system. The Impact and other subsequent Interconnection Studies are designed to identify attachment facilities, Network Upgrades and other Direct Assignment Facilities needed to accept power into the grid at each specific interconnection receipt point.

## Model Development

### Interconnection Requests Included in the DISIS-2010-001 Study

SPP has included all interconnection requests that submitted a Definitive Interconnection System Impact Study request no later than March 31, 2010 and were subsequently accepted by Southwest Power Pool under the terms of the Generation Interconnection Procedures (GIP) that became effective March 31, 2010.

Affected System Interconnection Requests - Also included in this Definitive Impact Study are four Affected System Studies, one on the Lea County Electric Cooperative system in Lea County, New Mexico (given the designation ASGI-2010-010) and three wind farm requests on the Tri County Electric Cooperative system in Texas County, Oklahoma (given the collective designation ASGI-2010-011).

The interconnection requests that are included in this study are listed in Appendix A.

---

<sup>2</sup> The generation interconnection requests in-service dates will need to be deferred based on the required lead time for the Network Upgrades necessary. The Interconnection Customer's that proceed to the Facility Study will be provided a new in-service date based on the completion of the Facility Study.

## Previous Queued Projects

The previous queued projects included in this study are listed in Appendix B. In addition to the Base Case Upgrades, the previous queued projects and associated upgrades were assumed to be in-service and added to the Base Case models. These projects were dispatched as Energy Resources with equal distribution across the SPP footprint.

## Development of Base Cases

**Powerflow** - The 2010 series Transmission Service Request (TSR) Models 2011 spring and 2016 summer and winter peak scenario 0 peak cases were used for this study. After the 2011 spring and the 2016 summer and winter peak cases were developed, each of the control areas' resources were then re-dispatched using current dispatch orders.

**Stability** – The 2010 series SPP Model Development Working Group (MDWG) Models 2011 winter and 2011 summer were used for this study.

## Base Case Upgrades

The following facilities are part of the SPP Transmission Expansion Plan or the Balanced Portfolio or recently approved Priority Projects. These facilities have been approved or are in construction stages and were assumed to be in-service at the time of dispatch and added to the base case models. The DISIS-2010-001 Customers have not been assigned cost for the below listed projects. The DISIS-2010-001 Customers Generation Facilities in service dates may need to be delayed until the completion of the following upgrades. If for some reason, construction on these projects is discontinued, additional restudies will be needed to determine the interconnection needs of the DISIS customers.

- Woodward – Northwest 345kV line and associated projects to be built by OKGE placed in service in 2010.
- Hitchland 345/230/115kV upgrades to be built by SPS for 2010/2011 in-service<sup>3</sup>.
  - Hitchland – Moore County 230kV line
  - Hitchland – Perryton 230kV line
  - Hitchland – Texas County 115kV line
  - Hitchland – Hansford County 115kV line
  - Hitchland – Sherman County Tap 115kV line
- Valliant – Hugo – Sunnyside 345kV – assigned to Aggregate Study AG3-2006 Customers for 2012 in-service.
- Wichita – Reno County – Summit 345kV to be built by WERE for 2010 in-service<sup>4</sup>.
- Rose Hill – Sooner 345kV to be built by WERE/OKGE for 2013 in-service.
- Knob Hill – Steele City 115kV to be built by NPPD/WERE for 2010 in-service.
- Balanced Portfolio Projects<sup>5</sup>:
  - Anadarko 345/138/13.2kV Autotransformer
  - Woodward – TUOCO 345kV line
  - Iatan – Nashua 345kV line
  - Muskogee – Seminole 345kV line

---

<sup>3</sup> Approved 230kV upgrades are based on SPP 2007 STEP. Upgrades may need to be re-evaluated in the system impact study.

<sup>4</sup> Approved based on an order of the Kansas Corporation Commission issued in Docket no. 07-WSEE-715-MIS

<sup>5</sup> Notice to Construct (NTC) issued June, 2009

- Knoll – Axtell 345kV line
- Spearville – Knoll 345kV line
- Tap Stillwell – Swissvale 345kV line at West Gardner
- Priority Projects<sup>6</sup>:
  - Hitchland - Woodward double circuit 345kV
  - Woodward – Medicine Lodge double circuit 345kV
  - Spearville – Comanche double circuit 345kV
  - Comanche – Medicine Lodge double circuit 345kV
  - Medicine Lodge – Wichita double circuit 345kV
  - Medicine Lodge 345/138kV autotransformer

## Contingent Upgrades

The following facilities do not yet have approval. These facilities have been assigned to higher queued interconnection customers. These facilities have been included in the models for the DISIS-2010-001 study and are assumed to be in service. The DISIS-2010-001 Customers at this time do not have responsibility for these facilities but may later be assigned the cost of these facilities if higher queued customers terminate their GIA or withdraw from the interconnection queue. The DISIS-2010-001 Customer Generation Facilities in service dates may need to be delayed until the completion of the following upgrades.

- Finney – Holcomb 345kV Ckt #2 line assigned to GEN-2006-044 interconnection customer. This customer is currently in suspension<sup>7</sup>.
- Central Plains – Setab 115kV transmission line assigned to GEN-2007-013 interconnection customer. This customer is currently in suspension.
- Spearville 345/230kV autotransformer #2 assigned to 1<sup>st</sup> Cluster Interconnection Customers (100% to GEN-2006-006)
- Grassland 230/115kV autotransformer #2 assigned to 1<sup>st</sup> Cluster Interconnection Customers (100% to GEN-2008-016)
- Spearville 230/115kV autotransformer #2 assigned to DIS-2009-001-1 Interconnection Customers (100% to GEN-2008-079)
- Petersburg – Madison 115kV assigned to DIS-2009-001-1 Interconnection Customers
- Judson Large – North Judson Large – Spearville Ckt #2 assigned to DIS-2009-001-1 Interconnection Customers (100% to GEN-2008-079)
- GEN-2008-038 Tap – Barnsdall 138kV assigned to DIS-2009-001-1 Interconnection Customers (100% to GEN-2008-038)
- Belden – Bloomfield 115kV assigned to DIS-2009-001-1 Interconnection Customers

## Potential Upgrades Not in the Base Case

---

<sup>6</sup> Notice to Construct (NTC) issued June, 2010. NTC for double circuit lines indicated that NTC may be revised at a later time to be built at a higher voltage.

<sup>7</sup> Based on Facility Study Posting November 2008

Any potential upgrades that do not have a Notification to Construct (NTC) have not been included in the base case. These upgrades include any identified in the SPP Extra-High Voltage (EHV) overlay plan or any other SPP planning study other than the upgrades listed above in the previous sections.

## Regional Groupings

The interconnection requests listed in Appendix A were grouped together in fourteen different regional groups based on geographical and electrical impacts. These groupings are shown in Appendix C.

To determine interconnection impacts, fourteen different dispatch variations of the spring base case models were developed to accommodate the regional groupings.

**Powerflow** - For each group, the various wind generating plants were modeled at 80% nameplate of maximum generation. The wind generating plants in the other areas were modeled at 20% nameplate of maximum generation. This process created fifteen different scenarios with each group being studied at 80% nameplate rating. These projects were dispatched as Energy Resources with equal distribution across the SPP footprint. This method allowed for the identification of network constraints that were common to the regional groupings that could then in turn have the mitigating upgrade cost allocated throughout the entire cluster. Each interconnection request was also modeled separately at 100% nameplate for certain analyses.

Peaking units were not dispatched in the 2011 spring model. To study peaking units' impacts, the 2016 summer and winter peak model was chosen and peaking units were modeled at 100% of the nameplate rating and wind generating facilities were modeled at 10% of the nameplate rating.

**Stability** - For each group, all interconnection requests (wind and non-wind) were modeled at 100% nameplate of maximum generation in both winter and summer seasonal models. The wind interconnection requests in the other areas were modeled at 20% nameplate of maximum generation while fossil units were modeled at 100% in the other areas. This process created twelve different scenarios with each group being studied at 100% nameplate rating. These projects were dispatched as Energy Resources with equal distribution across the SPP footprint.

## Identification of Network Constraints

The initial set of network constraints were found by using PTI MUST First Contingency Incremental Transfer Capability (FCITC) analysis on the entire cluster grouping dispatched at the various levels mentioned above. These constraints were then screened to determine if any of the generation interconnection requests had at least a 20% Distribution Factor (DF) upon the constraint. Constraints that measured at least a 20% DF from at least one interconnection request were considered for mitigation.

## Determination of Cost Allocated Network Upgrades

Cost Allocated Network Upgrades of wind generation interconnection requests were determined using the 2011 spring model. Cost Allocated Network Upgrades of peaking units was determined using the 2016 summer peak model. Once a determination of the required Network Upgrades was made, a powerflow model of the 2010 spring case was developed with all cost allocated Network Upgrades in-service. A MUST FCITC analysis was performed to determine the Power Transfer Distribution Factors (PTDF), defined as a distribution factor with system impact conditions that each generation interconnection request had on each new upgrade. The impact each generation interconnection request had on each upgrade project was weighted by the size of each request. Finally the costs due by each request for a particular project were then determined by allocating the portion of each request's impact over the impact of all the required upgrades.

For example, assume that there are three Generation Interconnection requests, X, Y, and Z that are responsible for the costs of Upgrade Project '1'. Given that their respective PTDF for the project have been determined, the cost allocation for Generation Interconnection request 'X' for Upgrade Project 1 is found by the following set of steps and formulas:

- Determine an Impact Factor on a given project for all responsible GI requests:

$$\text{Request X Impact Factor on Upgrade Project 1} = \text{PTDF\%}(X) * \text{MW}(X) = X_1$$

$$\text{Request Y Impact Factor on Upgrade Project 1} = \text{PTDF\%}(Y) * \text{MW}(Y) = Y_1$$

$$\text{Request Z Impact Factor on Upgrade Project 1} = \text{PTDF\%}(Z) * \text{MW}(Z) = Z_1$$

- Determine each request's Allocation of Cost for that particular project:

$$\text{Request X's Project 1 Cost Allocation (\$)} = \frac{\text{Network Upgrade Project 1 Cost}(\$) * X_1}{X_1 + Y_1 + Z_1}$$

- Repeat previous for each responsible GI request for each Project

The cost allocation of each needed Network Upgrade is determined by the size of each request and its impact on the given project. This allows for the most efficient and reasonable mechanism for sharing the costs of upgrades.

### Credits for Amounts Advanced for Network Upgrades

Interconnection Customer shall be entitled to credits in accordance with Attachment Z1 of the SPP Tariff for any Network Upgrades including any tax gross-up or any other tax-related payments associated with the Network Upgrades, and not refunded to the Interconnection Customer.

## Interconnection Facilities

The requirement to interconnect the 4,504 MW of generation into the existing and proposed transmission systems in the affected areas of the SPP transmission footprint consist of the necessary cost allocated shared facilities listed in Appendix F by upgrade. The interconnection requirements for the cluster total \$350,000,000. Interconnection Facilities, including prior allocated facilities, specific to each generation interconnection request are listed in Appendix E.

A list of constraints with greater than or equal to a 20% OTDF that were identified and used for mitigation are listed in Appendix G. Other Network Constraints in the AEPW, MIDW, MIPU, MKEC, NPPD, OKGE, SPS, SUNC, AND WERE transmission systems that were identified are shown in Appendix H. With a defined source and sink in a TSR, this list of Network Constraints will be refined and expanded to account for all Network Upgrade requirements.

A preliminary one-line drawing for each generation interconnection request are listed in Appendix D. Figure 1 depicts the major transmission line Network Upgrades needed to support the interconnection of the generation amounts requested in this study.

## Powerflow

### Powerflow Analysis Methodology

The Southwest Power Pool (SPP) Criteria states that:

“The transmission system of the SPP region shall be planned and constructed so that the contingencies as set forth in the Criteria will meet the applicable NERC Reliability Standards for transmission planning. All MDWG power flow models shall be tested to verify compliance with the System Performance Standards from NERC Table 1 – Category A.”

The ACCC function of PSS/E was used to simulate single contingencies in portions or all of the modeled control areas of American Electric Power West (AEPW), Empire District Electric (EMDE), Grand River Dam Authority (GRDA), Kansas City Power & Light (KCPL), Midwest Energy (MIDW), MIPU, MKEC, Nebraska Public Power District (NPPD), OG&E Electric Services (OKGE), Omaha Public Power District (OPPD), Southwest Public Service (SPS), Sunflower Electric (SUNC), Westar Energy (WERE), Western Farmers Electric Cooperative (WFEC) and other control areas were applied and the resulting scenarios analyzed. This satisfies the “more probable” contingency testing criteria mandated by NERC and the SPP criteria.

### Powerflow Analysis

A powerflow analysis was conducted for each Interconnection Customer’s facility using modified versions of the 2010 spring peak and the 2014 summer and winter peak models. The output of the Interconnection Customer’s facility was offset in each model by a reduction in output of existing online SPP generation. This method allows the request to be studied as an Energy Resource (ER) Interconnection Request. The available seasonal models used were through the 2014 Summer Peak.

This analysis was conducted assuming that previous queued requests in the immediate area of these interconnect requests were in-service. The analysis of each Customer's project indicates that additional criteria violations will occur on the AEPW, MIDW, OKGE, SPS, SUNC, SWPA, MKEC, WERE, AND WFEC transmission systems under steady state and contingency conditions in the peak seasons.

### **Cluster Group 1 (Woodward Area)**

The Woodward area contained approximately 292 MW of new interconnection requests in addition to the 3,053 MW of prior queued interconnection requests. Constraints were observed on the Northwest – Tatonga 345kV line and the Fargo Junction – Woodward 69kV line. To mitigate the Northwest – Tatonga 345kV constraint, a 345kV circuit from Wheeler – Border that was identified for Group 2 was found to mitigate the Group 1 constraint. To mitigate the Fargo Junction – Woodward 69kV constraint the line will need to be rebuilt.

### **Cluster Group 2 (Hitchland Area)**

The Hitchland area contained 1,092 MW of interconnection request in addition to the 2,282 MW of previous queued generation interconnection requests. An outage of the Finney-Stevens County 345kV line or an outage of the double circuit 345kV line from Hitchland-Woodward was found to cause possible voltage collapse. To mitigate the constraint, a double 345kV circuit from Hitchland – Border (Wheeler). Additionally, the point of interconnection for GEN-2008-047 was located to the original requested position back to a point near the midpoint of the Hitchland-Woodward 345kV line as the line voltage of this line was not approved to be increased to 765kV.

### **Cluster Group 3 (Spearville Area)**

The Spearville area contained 781 MW of interconnection requests and 2,333 MW of previous queued interconnection requests. There were constraints identified on the lower 230 and 115kV systems out of Spearville including the 115kV system near interconnection request GEN-2009-059. To mitigate these issues, a new 345/115kV autotransformer is necessary at Spearville as well as additional 115kV line capacity from Spearville toward the wind farms interconnecting on the Cudahy – Judson Large 115kV.

### **Cluster Group 4 (Mingo/NW Kansas Group)**

The Mingo/NW Kansas group had 0 MW in addition to the 924 MW of previously queued generation in the area. No new constraints were found in this area.

### **Cluster Group 5 (Amarillo Area)**

The Amarillo group had 51 MW of interconnection requests in addition to the 2,168 MW of previously queued interconnection requests in this area. The major constraint for the GEN-2008-088 request was on the Switch 2749 substation – Wildorado 69kV line. To mitigate the constraint, the line will need to be rebuilt. In addition, the GEN-2008-088 request was found to contribute to the possible voltage collapse for the outage of the Hitchland-Woodward 345kV double circuit and Finney-Stevens 345kV outage.

### **Cluster Group 6 (South Panhandle/New Mexico)**

This group had 567 MW of interconnection requests in addition to the 1,390 MW of previously queued interconnection requests. The major constraints in the New Mexico area were on the Plant X Station – Tolk Station 230kV lines. To mitigate the constraints, the following actions were taken: Both Plant X Station – Tolk Station 230kV lines were rebuilt, and replacement terminal equipment on the Potter – Plant X 230kV line was modeled. The wind farm projects in Group 6 were also found to contribute to the possible voltage collapse on the Hitchland-Woodward 345kV double circuit.

### **Cluster Group 7 (Southwestern Oklahoma)**

This group had 286 MW of interconnection requests in addition to the 1,838 MW of previous queued generation in the area. There were several constraints noticed in the Southwestern Oklahoma area, however, the major constraints were in the Clinton Junction and Weatherford areas due to GEN-2009-030 and constraints on the existing lines out of Washita substation due to all requests in the area. To mitigate the constraints in the area, the following upgrades were assigned to the study projects: a second Washita – Anadarko 138kV line was added, a 138kV line from Weatherford – Washita was added, replacement terminal equipment on the Blue Canyon – Washita 138kV line was modeled, and replacement terminal equipment on the GEN-2008-037 – Washita 138kV line was modeled.

### **Cluster Group 8 (South Central Kansas/North Oklahoma)**

This group had 629 MW of interconnection requests in addition to the 3,217 MW of previous queued generation in the area. No new constraints were found in this area. Stability issues in the area of Wolf Creek were identified and are discussed in the stability section.

### **Cluster Group 9 (Northeast Nebraska)**

This group had 201 MW of interconnection requests in addition to the 598 MW of previous queued generation in the area. The major constraints were overloads on the Columbus – Madison County – Ft. Randle 230kV line and the Madison – Norfolk 115kV line. To mitigate the constraints, a 115kV line from Madison County – Norfolk was added, and the Petersburg – Madison 115kV line was tapped and tied to the Madison County 230kV bus.

### **Cluster Group 10 (North Nebraska)**

This group had 0 MW of interconnection requests in addition to the 284 MW of previous queued generation in the area.

### **Cluster Group 11 (North Kansas)**

This group had 322 MW of interconnection requests in addition to the 976 MW of previous queued generation in the area. The major constraints for the North Kansas area are the South Hays – Hays Plant – Vine Street 115kV line, and the Smoky Hills – Summit 230kV line. To mitigate the constraints, the following actions were taken: the South Hays – Hays Plant – Vine Street 115kV line was rebuilt. Also, a second Knoll 345/230kV transformer was added to mitigate the Smoky Hills – Summit 230kV line. Constraints around the interconnection point of GEN-2009-040 were also found but relieved when the Knob Hill – Steele City 115kV STEP upgrade, slated for a 2010 in-service, was added to the base case.

### **Cluster Group 12 (Northwest Arkansas)**

This group had 0 MW of interconnection requests in addition to the 0 MW of previous queued generation in the area.

### **Cluster Group 13 (Northwest Missouri)**

This group had 0 MW of interconnection requests in addition to the 2,481 MW of previous queued generation in the area.

### **Cluster Group 14 (South Central Oklahoma)**

This group had 206 MW of interconnection requests in addition to the 0 MW of previous queued generation in the area. No new constraints were found in this area.

### **Cluster Group 15 (Southwest Nebraska)**

This group had 90 MW of interconnection requests in addition to the 0 MW of previous queued generation in the area. No new constraints were found in this area.

## **Stability Analysis**

A selected stability analysis was conducted for each Interconnection Customer's facility using modified versions of the 2011 winter peak and the 2011 summer peak models. The stability analysis was conducted with all upgrades in service that were identified in the powerflow analysis. For each group, the interconnection requests were studied at 100% nameplate output while the other groups were dispatched at 20% output for wind requests and 100% output for fossil requests. The exception to this practice was that Groups 9 and 10 were combined at the request of Transmission Owner. This exception was analyzed due despite the large geographic area of the two groupings, there are limited transmission paths that the two groups share. The output of the Interconnection Customer's facility was offset in each model by a reduction in output of existing online SPP generation. The following synopsis is included for each group. A power factor analysis for each request was completed as well as selected 345kV outage stability simulations.

### **Cluster Group 1 (Woodward Area)**

The analysis for Group 1 showed that a reactive power deficiency was apparent with addition of the interconnection request near Tatonga. The GEN-2008-044 and GEN-2010-011 interconnection requests will need to provide 95% lagging power factor at the point of interconnection (Tatonga). These requests combined will need to be able to provide over 71Mvar at the point of interconnection. This will require additional capacitor banks. With the power factor requirements and all network upgrades in service, all interconnection request in Group 1 will meet FERC Order #661A low voltage ride through (LVRT) requirements.

### Power Factor Requirements

Request	Size (MW)	Generator Model	Point of Interconnection	Final PF Requirement at POI		Estimated Capacitor Requirement (Mvar)
				Lagging (supplying)	Leading (absorbing)	
GEN-2008-044	197.8	Siemens SWT 2.3 MW	Tatonga 345kV	0.95	1.00	no
GEN-2010-011	29.7					
GEN-2010-008	64.4	Siemens SWT 2.3 MW	Fargo Jct 69kV	0.993	0.965	no

## Cluster Group 2 (Hitchland Area)

The analysis for Group 2 showed that a reactive power deficiency was apparent with addition of the interconnection request near Hitchland. The GEN-2008-047 interconnection request will need to provide 95% lagging power factor at the point of interconnection. These requests combined will need to be able to provide over 400Mvar at the point of interconnection. This will require additional capacitor banks. With the power factor requirements and all network upgrades in service, all interconnection request in Group 2 will meet FERC Order #661A low voltage ride through (LVRT) requirements and the transmission system will remain stable.

### Power Factor Requirements

Request	Size (MW)	Generator Model	Point of Interconnection	Final PF Requirement at POI		Estimated Capacitor Requirement (Mvar)
				Lagging (supplying)	Leading (absorbing)	
GEN-2008-047	300	G.E. 1.5MW	Tap Hitchland-Woodward 345kV	0.95	1.00	Yes (107.5 MVar)
GEN-2008-110 GEN-2010-014	300 358.8	G.E. 1.5MW Siemens 2.3MW	Hitchland 345kV	0.95	0.98	No
GEN-2010-007	73.8	Vestes V100 1.8MW	Riverside – Pringle 115kV	1.00	0.95	Yes (12.63 MVar)

## Cluster Group 3 (Spearville Area)

With the power factor requirements and all network upgrades in service, all interconnection request in Group 3 will meet FERC Order #661A low voltage ride through (LVRT) requirements and the transmission system will remain stable.

### Power Factor Requirements

Request	Size (MW)	Generator Model	Point of Interconnection	Final PF Requirement at POI		Estimated Capacitor Requirement (Mvar)
				Lagging (supplying)	Leading (absorbing)	
GEN-2009-059	100.5	GE 1.5MW	Tap G08-79T – Cudahay 115kV (573029-539659)	0.97	0.98	No
GEN-2010-009	165.6	Siemens SWT 2.3MW	Gray County 345kV (531000)(G07-040-POI)	0.95	0.95	Yes (136.1 MVar)

## Cluster Group 4 (Mingo Area)

There was no stability analysis conducted in the Mingo area due to no requests in the area.

### **Cluster Group 5 (Amarillo Area)**

The Amarillo area stability analysis revealed no new stability issues due to the addition of the study projects. With the power factor requirements and all network upgrades in service, all interconnection request in Group 5 will meet FERC Order #661A low voltage ride through (LVRT) requirements and the transmission system will remain stable.

Power Factor Requirements

Request	Size (MW)	Generator Model	Point of Interconnection	Final PF Requirement at POI		Estimated Capacitor Requirement (Mvar)
				Lagging (supplying)	Leading (absorbing)	
GEN-2008-088	50.6	Siemens SWT 2.3MW	Vega 69kV	1.0	0.957	No

### **Cluster Group 6 (South Panhandle Area)**

With the power factor requirements and all network upgrades in service, all interconnection request in Group 6 will meet FERC Order #661A low voltage ride through (LVRT) requirements and the transmission system will remain stable

Power Factor Requirements

Request	Size (MW)	Generator Model	Point of Interconnection	Final PF Requirement at POI		Estimated Capacitor Requirement (Mvar)
				Lagging (supplying)	Leading (absorbing)	
GEN-2008-022	300	G.E. 1.5MW	Eddy – Tolk 345kV	1.00	0.96	No
GEN-2009-067S	20	Solar	Seven Rivers 69kV	0.95	0.95	
GEN-2010-006	205	GENROU	Jones 230kV	0.95	0.95	0
ASGI-2010-010	48	GENROU	Lovington 115kV	0.95	0.95	0

### **Cluster Group 7 (Southwest Oklahoma)**

With the power factor requirements and all network upgrades in service, all interconnection request in Group 7 will meet FERC Order #661A low voltage ride through (LVRT) requirements and the transmission system will remain stable

## Power Factor Requirements

Request	Size (MW)	Generator Model	Point of Interconnection	Final PF Requirement at POI		Estimated Capacitor Requirement (Mvar)
				Lagging (supplying)	Leading (absorbing)	
GEN-2008-037	100.8	Vestas V90 1.8MW	Washita (521089)	0.96	0.93	Yes (6 MVar)
GEN-2009-030	100.8	GE 1.6MW	Weatherford 138kV (521092)	0.95	1.00	Yes (24 MVA)
GEN-2009-060	85.5	GE 1.5MW	Gotebo 69kV (520925)	1.000	0.97	No

## Cluster Group 8 (South Central Kansas)

The South Central Kansas stability analysis revealed possible oscillatory issues with GEN-2008-098 and GEN-2010-003 in relation to the Wolf Creek nuclear plant. To relieve these oscillation issues, these requests will need to install a +/-15Mvar Static Var Compensator at the wind farm. With the power factor requirements, the SVCs, and all network upgrades in service, all interconnection request in Group 8 will meet FERC Order #661A low voltage ride through (LVRT) requirements and the transmission system will remain stable.

## Power Factor Requirements

Request	Size (MW)	Generator Model	Point of Interconnection	Final PF Requirement at POI		Estimated Capacitor Requirement (Mvar)
				Lagging (supplying)	Leading (absorbing)	
GEN-2008-071	76.8	GE 1.6MW	Newkirk 138kV Wolf Creek – LaCygne 345kV	0.95	0.95	Yes (9 MVA)
GEN-2008-098	100.8	Vestas V90 1.8MW		0.98	0.95	
GEN-2010-003	100.8					No
GEN-2010-005	300	Clipper C95 2.5MW	Wichita – Woodring 345kV	0.99	0.99	No
GEN-2010-013	50.4	Vestas V90 1.8MW	Latham – Neosho 345kV	0.95	0.98	Yes (54 MVA)

## Cluster Group 9 (Northeast Nebraska)

With the power factor requirements and all network upgrades in service, all interconnection request in Group 9 will meet FERC Order #661A low voltage ride through (LVRT) requirements and the transmission system will remain stable.

## Power Factor Requirements

Request	Size (MW)	Generator Model	Point of Interconnection	Final PF Requirement at POI		Estimated Capacitor Requirement (Mvar)
				Lagging (supplying)	Leading (absorbing)	
GEN-2006-044N02	100.5	GE 1.5MW	Madison County 230kV	1.00	0.97	No
GEN-2010-010	100.5	GE 1.5MW	Madison County 115kV	1.00	0.95	Yes (4.85 MVar)

### Cluster Group 10 (North Nebraska)

There was no stability analysis conducted in the North Nebraska area due to no requests in the area.

### Cluster Group 11 (North Kansas)

The North Kansas stability analysis revealed that GEN-2009-020 will require a +/-15 Mvar Static Var Compensator. With the power factor requirements, and all network upgrades in service, all interconnection request in Group 11 will meet FERC Order #661A low voltage ride through (LVRT) requirements and the transmission system will remain stable.

#### Power Factor Requirements

Request	Size (MW)	Generator Model	Point of Interconnection	Final PF Requirement at POI		Estimated Capacitor Requirement (Mvar)
				Lagging (supplying)	Leading (absorbing)	
GEN-2009-008	199.5	GE 1.5MW	South Hays 230kV	0.99	0.94	No
GEN-2009-020	48.6	Vestes V90 1.8MW	Balzine – Nekoma 69kV	1.0	0.98	No
GEN-2009-040	73.8	Vestes V90 1.8MW	Smittyville-Knob Hill 115kV	1.0	0.95	Yes (5 MVar)

### Cluster Group 12 (Northwest Arkansas)

There was no stability analysis conducted in the Northwest Arkansas area due to no requests in the area.

### Cluster Group 13 (Northwest Missouri)

There was no stability analysis conducted in the Northwest Missouri area due to no requests in the area.

### Cluster Group 14 (South Central Oklahoma)

The South Central Oklahoma stability analysis revealed no stability issues with the study requests.

## Power Factor Requirements

Request	Size (MW)	Generator Model	Point of Interconnection	Final PF Requirement at POI		Estimated Capacitor Requirement (Mvar)
				Lagging (supplying)	Leading (absorbing)	
GEN-2008-046	200	Vestes V90 1.8MW	Sunnyside 345kV	0.98	0.955	yes
GEN-2009-032S	6.4	GENROU	Foster 138kV	0.95	0.95	0

## Cluster Group 15 (Southwest Nebraska)

The Group 15 stability analysis revealed no stability issues with the study request. With the power factor requirements and network upgrades in service, the interconnection requests will meet FERC LVRT requirements and the transmission system will remain stable.

## Power Factor Requirements

Request	Size (MW)	Generator Model	Point of Interconnection	Final PF Requirement		Estimated Capacitor Requirement (Mvar)
				Lagging (supplying)	Leading (absorbing)	
GEN-2008-123N	89.7	Siemens SWT 2.3 MW	Pauline – Guide Rock 115kV	1.0	0.95	Yes (7 MVar)

## Conclusion

The minimum cost of interconnecting all of the interconnection requests included in this Impact Cluster Study is estimated at \$350,000,000 for the Allocated Network Upgrades and Transmission Owner Interconnection Facilities are listed in Appendix E, F, and G. These costs do not include the cost of upgrades of other transmission facilities listed in Appendix H which are Network Constraints.

These interconnection costs do not include any cost of Network Upgrades determined to be required by short circuit analysis. These studies are being performed as part of the Interconnection System Facility Study that each customer has already executed.

The required interconnection costs listed in Appendices E, and F, and G and other upgrades associated with Network Constraints do not include all costs associated with the deliverability of the energy to final customers. These costs are determined by separate studies if the Customer submits a Transmission Service Request (TSR) through SPP's Open Access Same Time Information System (OASIS) as required by Attachment Z1 of the SPP Open Access Transmission Tariff (OATT).

## Appendix

## **E: Cost Allocation per Interconnection Request**

This section shows each Generation Interconnection Request Customer, their current study impacted Network Upgrades, and the previously allocated upgrades upon which they rely to accommodate their interconnection to the transmission system.

The costs associated with the current study Network Upgrades are allocated to the Customers shown in this report.

In addition should a higher queued request, defined as one this study includes as a prior queued request, withdraw, the Network Upgrades assigned to the withdrawn request may be reallocated to the remaining requests that have an impact on the Network Upgrade under a restudy. Also, should a Interconnection Request choose to go into service prior to the operation date of any necessary Network Upgrades, the costs associated with those upgrades may be reallocated to the impacted Interconnection Request. The actual costs allocated to each Generation Interconnection Request Customer will be determined at the time of a restudy.

The required interconnection costs listed do not include all costs associated with the deliverability of the energy to final customers. These costs are determined by separate studies if the Customer submits a Transmission Service Request through SPP's Open Access Same Time Information System (OASIS) as required by Attachment Z1 of the SPP OATT. In addition, costs associated with a short circuit analysis will be allocated should the Interconnection Request Customer choose to execute a Facility Study Agreement.

# Appendix E. - Cost Allocation Per Request - DIS-2010-001

**(Including Previously Allocated Network Upgrades\*)**

Interconnection Request and Upgrades	Upgrade Type	Allocated Costs	E + C Costs
<b>ASGI-2010-010</b>			
ASGI-2010-010 Interconnection Costs See Oneline Diagram.	Previously Allocated	\$1.00	\$1
	<b>Current Study Total</b>	<b>\$1.00</b>	
<b>ASGI-2010-011</b>			
ASGI-2010-011 Interconnection Costs See Oneline Diagram.	Previously Allocated	\$1.00	\$1
Hitchland 230/115/13.2kV Transformer CKT 2 DISIS-2010-001 Restudy	Current Study	\$2,116,488.34	\$3,000,000
Hitchland - Border 345kV Double CKT Build approximately 105 miles of 345kV.	Current Study	\$6,115,405.62	\$128,120,399
Hitchland - Woodward 345kV CKT 1 Priority Project: Hitchland - Woodward Dbl 345kV CKT (Total Project E&C Cost Shown).	Previously Allocated		\$247,005,793
Border - Woodward 345KV CKT 1 Balanced Portfolio: TUOCO - Woodward 345kV CKT (Total Project E&C Cost Shown).	Previously Allocated		\$148,727,500
Medicine Lodge - Woodward 345kV	Previously Allocated		\$194,972,759
Medicine Lodge - Wichita 345kV Priority Project: Spearville - Comanche - Med Lodge - Wichita Dbl 345kV CKT (Total Project E&C Cost Shown).	Previously Allocated		\$356,300,000
	<b>Current Study Total</b>	<b>\$8,231,894.96</b>	
<b>GEN-2006-044N02</b>			
Madison County 230kV Substation See Oneline Diagram.	Current Study	\$1,800,000.00	\$3,600,000
Madison County Tap 230/115/13.8kV Transformer CKT 1 Install 230/115/13.8kV Transformer and Associated 230kV ring bus and 115kv ring bus at New Madison County Tap.	Current Study	\$9,550,000.00	\$19,100,000
Norfolk - Madison County Tap 115kV CKT 1 Build approximately 20 miles of 115kV between Norfolk and new tap on Petersburg - Madison 115kV CKT 1.	Current Study	\$9,400,000.00	\$18,800,000
	<b>Current Study Total</b>	<b>\$20,750,000.00</b>

## **F: Cost Allocation per Proposed Study Network Upgrade**

This section shows each Direct Assigned Facility and Network Upgrade and the Generation Interconnection Request Customer(s) which have an impact in this study assuming all higher queued projects remain in the queue and achieve commercial operation.

The required interconnection costs listed do not include all costs associated with the deliverability of the energy to final customers. These costs are determined by separate studies if the Customer submits a Transmission Service Request through SPP's Open Access Same Time Information System (OASIS) as required by Attachment Z1 of the SPP OATT. In addition, costs associated with a short circuit analysis will be allocated should the Interconnection Request Customer choose to execute a Facility Study Agreement.

There may be additional costs allocated to each Customer. See Appendix E for more details.

## Appendix F. - Cost Allocation Per Upgrade Facility - DIS-2010-001

Upgrade Facility and Designated Requests	Allocated Costs	E + C Costs
<b><u>ASGI-2010-010 Interconnection Costs</u></b>		<b>\$1</b>
