Executive Summary

Generation Interconnection customers have requested a Definitive Interconnection System Impact Study (DISIS) under the Generation Interconnection Procedures (GIP) in the Southwest Power Pool Open Access Transmission Tariff (OATT). The Interconnection Customers' requests have been clustered together for the following System Impact Cluster Study window which closed March 31, 2012. The customers will be referred to in this study as the DISIS-2012-001 Interconnection Customers. This System Impact Study analyzes the interconnecting of multiple generation interconnection requests associated with new generation totaling approximately 616.3 MW of new generation which would be located within the transmission systems of Oklahoma Gas and Electric (OKGE), Sunflower Electric Power Corporation/Mid-Kansas Electric Power LLC (SUNC)/(MKEC), and Southwestern Public Service (SPS). The various generation interconnection requests have differing proposed in-service dates¹. The generation interconnection requests included in this System Impact Cluster Study are listed in Appendix A by their queue number, amount, requested interconnection service, area, requested interconnection point, proposed interconnection point, and the requested in-service date.

Power flow analysis has indicated that for the power flow cases studied, 616.3 MW of nameplate generation may be interconnected with transmission system reinforcements within the SPP transmission system. Dynamic stability and power factor analysis has determined the need for reactive compensation in accordance with Order No. 661-A for wind farm interconnection requests and those requirements are listed for each interconnection request within the contents of this report. Dynamic stability analysis has determined that the transmission system will remain stable with the assigned Network Upgrades and necessary reactive compensation requirements.

The total estimated minimum cost for interconnecting the DISIS-2012-001 Interconnection Customers is \$50,233,040.99. These costs are shown in Appendix E and F. Interconnection Service to DISIS-2012-001 Interconnection Customers is also contingent upon higher queued customers paying for certain required network upgrades. **The in service date for the DISIS customers will be deferred until the construction of these network upgrades can be completed.**

These costs do not include the Interconnection Customer Interconnection Facilities as defined by the SPP Open Access Transmission Tariff (OATT). This cost does not include additional network constraints in the SPP transmission system identified and shown in Appendix H.

Network Constraints listed in Appendix H are in the local area of the new generation when this generation is injected throughout the SPP footprint for the Energy Resource (ERIS) Interconnection Request. Certain Interconnection Requests were also studied for Network Resource

¹ The generation interconnection requests in-service dates will need to be deferred based on the required lead time for the Network Upgrades necessary. The Interconnection Customers that proceed to the Facility Study will be provided a new in-service date based on the Facility Study's time for completion of the Network Upgrades necessary.

Interconnection Service (NRIS). Those constraints are also listed in Appendix H. Additional Network constraints will have to be verified with a Transmission Service Request (TSR) and associated studies. With a defined source and sink in a TSR, this list of Network Constraints will be refined and expanded to account for all Network Upgrade requirements.

The required interconnection costs listed in Appendix E and F do not include all costs associated with the deliverability of the energy to final customers. These costs are determined by separate studies if the Customer submits a Transmission Service Request through SPP's Open Access Same Time Information System (OASIS) as required by Attachment Z1 of the SPP OATT.

Introduction

Pursuant to the Southwest Power Pool (SPP) Open Access Transmission Tariff (OATT), SPP has conducted this Definitive Interconnection System Impact Study (DISIS) for certain generation interconnection requests in the SPP Generation Interconnection Queue. These interconnection requests have been clustered together for the following System Impact Study window which closed March 31, 2012. The customers will be referred to in this study as the DISIS-2012-001 Interconnection Customers. This System Impact Study analyzes the interconnecting of multiple generation interconnection requests associated with new generation totaling 616.3 MW of new generation which would be located within the transmission systems of Oklahoma Gas and Electric (OKGE), Sunflower Electric Power Corporation/Mid-Kansas Electric Power LLC (SUNC/MKEC), and Southwestern Public Service (SPS). The various generation interconnection requests have differing proposed in-service dates². The generation interconnection requests included in this System Impact Study are listed in Appendix A by their queue number, amount, requested interconnection service, area, requested interconnection point, proposed interconnection point, and the requested in-service date.

The primary objective of this Definitive Interconnection System Impact Study is to identify the system constraints associated with connecting the generation to the area transmission system. The Impact and other subsequent Interconnection Studies are designed to identify attachment facilities, Network Upgrades and other Direct Assignment Facilities needed to accept power into the grid at each specific interconnection receipt point.

² The generation interconnection requests in-service dates will need to be deferred based on the required lead time for the Network Upgrades necessary. The Interconnection Customer's that proceed to the Facility Study will be provided a new in-service date based on the completion of the Facility Study.

Model Development

Interconnection Requests Included in the Cluster

SPP has included all interconnection requests that submitted a Definitive Interconnection System Impact Study Agreement no later than March 31, 2012 and were subsequently accepted by Southwest Power Pool under the terms of the Generator Interconnection Procedures (GIP). The interconnection requests that are included in this study are listed in Appendix A.

Affected System Interconnection Request

Also included in this Definitive Impact Study is a single Affected System Study, located on the Transmission system of Pioneer Electric Cooperative. Pioneer is a member of Sunflower Electric Power Corporation. The Affected System Study Request has been given the designation: ASGI-2012-006. ASGI-2012-006 capacity nameplate is 22.5 MW with Point of Interconnection (POI) at a tap on Hugoton – Rolla 69kV line.

Previously Queued Interconnection Requests

The previous queued requests included in this study are listed in Appendix B. In addition to the Base Case Upgrades, the previous queued requests and associated upgrades were assumed to be in-service and added to the Base Case models. These projects were dispatched as Energy Resources with equal distribution across the SPP footprint. Prior queued projects that requested Network Resource Interconnection Service (NRIS) were dispatched in an additional analysis into the balancing authority of the interconnecting transmission owner.

Development of Base Cases

Power Flow

The 2012 series Transmission Service Request (TSR) Models 2013 spring, 2013 summer and winter peak, 2018 summer and winter peak, and the 2023 summer peak scenario 0 cases were used for this study. After the cases were developed, each of the control areas' resources were then re-dispatched to account for the new generation requests using current dispatch orders.

Dynamic Stability

The 2012 series SPP Model Development Working Group (MDWG) Models 2014 summer and 2014 winter were used as starting points for this study.

Base Case Upgrades

The following facilities are part of the SPP Transmission Expansion Plan or the Balanced Portfolio or recently approved Priority Projects. These facilities, have an approved Notice to Construct (NTC), or are in construction stages and were assumed to be in-service at the time of dispatch and added to the base case models. The DISIS-2012-001 Customers have not been assigned acceleration costs for the below listed projects. The DISIS-2012-001 Customers Generation Facilities in-service dates may need to be delayed until the completion of the following upgrades. If for some reason, construction on these projects is discontinued, additional restudies will be needed to determine the interconnection needs of the DISIS customers.

- Hitchland 230/115kV area projects³:
 - Hitchland – Ochiltree 230kV Project, scheduled for 2/1/2013 in-service
- Balanced Portfolio Projects⁴:
 - Woodward – Border – TUCO 345kV project, scheduled for 5/19/2014 in-service
 - Woodward 345/138kV circuit #2 autotransformer
 - TUCO 345/138kV circuit #2 autotransformer
 - Reactors at Woodward and Border
 - Iatan– Nashua 345kV, scheduled for 6/1/2015 in-service
 - Nashua 345/161kV autotransformer
 - Muskogee– Seminole 345kV, scheduled for 12/31/2013 in-service
 - Cleveland – Sooner 345kV, scheduled for 12/31/2012 in-service
 - Tap Stillwell – Swissvale 345kV line at West Gardner, scheduled for 12/31/2012 in-service
- Priority Projects⁵:
 - Hitchland – Woodward double circuit 345kV, scheduled for 6/30/2014 in-service
 - Hitchland 345/230kV circuit #2 autotransformer
 - Woodward – Thistle double circuit 345kV, scheduled for 12/31/2014 in-service
 - Spearville – Clark double circuit 345kV, scheduled for 12/31/2014 in-service
 - Clark – Thistle double circuit 345kV, scheduled for 12/31/2014 in-service
 - Thistle – Wichita double circuit 345kV, scheduled for 12/31/2014 in-service
 - Thistle 345/138kV autotransformer, scheduled for 12/31/2014 in-service
 - Thistle – Flat Ridge 138kV, scheduled for 12/31/2014 in-service
- Various MKEC Transmission System Upgrades⁶
 - Harper – Flat Ridge 138kV rebuild, scheduled for 6/15/2013 in-service
 - Flat Ridge – Medicine Lodge 138kV rebuild, scheduled for 12/31/2013 in-service
 - Pratt – Medicine Lodge 115kV rebuild, scheduled for 6/15/2014 in-service
 - Medicine Lodge 138/115kV autotransformer replacement, scheduled for 6/1/2013 in-service
- Grassland Interchange 230/115kV transformer circuit #1 replacement⁷
- Move lines from Lea County to Hobbs 230/115kV, scheduled for 12/31/2013⁸

Contingent Upgrades

The following facilities do not yet have approval. These facilities have been assigned to higher queued interconnection customers. These facilities have been included in the models for the DISIS-2012-001 study and are assumed to be in service. This list may not be all inclusive. [The DISIS-2012-](#)

³ SPP Regional Reliability Projects identified in 2007 STEP. As of the writing of this report, SPP Project Tracking TAGIT shows some of these project's in-service dates have been delayed from the original 2010/2011 in-service dates.

⁴ Notice to Construct (NTC) issued June 2009.

⁵ Notice to Construct (NTC) issued June 2010.

⁶ SPP Transmission Service Projects identified in SPP-2007-AG3-AFS-9.

⁷ SPP Regional Reliability Project. Per 2013 ITP NT

⁸ SPP Regional Reliability Project. Per SPP-NTC-200166 issued April 2012

001 Interconnection Customers at this time do not have responsibility for these facilities but may later be assigned the cost of these facilities if higher queued customers terminate their GIA or withdraw from the interconnection queue. The DISIS-2012-001 Interconnection Customer Generation Facilities in service dates may need to be delayed until the completion of the following upgrades.

- Upgrades assigned to ICS-2008-001 Interconnection Customers
 - Line Traps at Amarillo South – Swisher 230kV
 - Finney-Holcomb 345kV circuit #2
- Upgrades assigned to DISIS-2009-001 Interconnection Customers:
 - Fort Dodge – North Fort Dodge – Spearville 115kV circuit #2
 - Albion – Petersburg – Neligh 115kV circuit #1 rerate (placed In-Service in 2011)
 - Fort Randall – Madison County – Kelly 230kV circuit #1 rerate (320MVA)
 - Spearville 345/115kV autotransformer circuit #1
- Upgrades assigned to DISIS-2010-001 Interconnection Customers:
 - Post Rock 345/230kV circuit #2 autotransformer
 - South Hays – Hays Plant – Vine Street 115kV circuit #1 rebuild
 - Switch 2749 – Wildorado 69kV circuit # 1 rebuild
 - Washita – Gracemont 138kV circuit #2 (placed In-Service in 2012)
- Upgrades assigned to DISIS-2010-002 Interconnection Customers:
 - Twin Church – Dixon County 230kV circuit #1 rerate (320MVA)
- Upgrades assigned to DISIS-2011-001 Interconnection Customers:
 - Beaver County – Buckner 345kV circuit #1 build
 - Beaver County 345kV Expansion (Tap & Tie Hitchland – Woodward circuit #2 into Beaver County 345kV)
 - Spearville – Mullergren – Reno double circuit 345kV build
 - Tatonga – Mathewson - Cimarron 345kV circuit #2 build
 - Tatonga terminal equipment upgrade (1792 MVA)
 - Rice County – Circle 230kV conversion circuit #1
 - Rice County – Lyons 115kV rebuild circuit #1
 - Rice County 230/115kV autotransformer circuit #1
 - Lyons – Wheatland 115kV rerate (199 MVA)
 - Hoskins – Dixon County – Twin Church 230kV circuit #1 rerate
 - (NRIS only) Spearville – Mullergren 230kV circuit #1 rebuild
 - (NRIS only) FPL Switch – Woodward - Mooreland 138kV circuit #1 rebuild
 - (NRIS only) Glass Mountain – Mooreland 138kV circuit #1 rebuild
 - (NRIS only) Woodward – Woodward EHV 138kV circuit #1 rebuild
 - (NRIS only) Woodward 138/69kV auto replacement
 - (NRIS only) Woodward (OGE) – Woodward (WFEC) 69kV rebuild
- Upgrades assigned to DISIS-2011-002 interconnection Customers:
 - Amoco Wasson – Oxy Tap – Yoakum 230kV circuit #1 – replace line traps
 - Harbine – Crete 115kV circuit #1 build
 - Jones – Lubbock South 230kV circuit #2 - replace line traps
 - Power System Stabilizers - Install Power System Stabilizers @ Tolk(Units: 1,2) and Jones (Units: 1,2,3,4)
 - Mustang – Yoakum 230kV circuit #1 replace line traps

- SUB 967 - SUB 968 69kV circuit #1 replace terminal equipment
- (NRIS only) Allen – Lubbock South 115kV circuit #1 rebuild
- (NRIS only) Hydro Carbon Tap - Sub974 69kV circuit #1 rewire CT
- (NRIS only) Lubbock South 230/115kV Autotransformer build circuit #2
- (NRIS only) Nebraska City U Syracuse – SUB 970 circuit #1 replace terminal equipment
- (NRIS only) Benton – Wichita 345kV circuit #1 rerate (1195MVA)
- (NRIS only) Chisolm – Maize – Evans Energy Center 138kV circuit #1 rebuild
- (NRIS only) Duncan-Tosco 69kV rebuild
- (NRIS only) Comanche Tap-Tosco 69kV rebuild
- (NRIS only) Cimarron 345/138kV autotransformer #3
- (NRIS only) Yoakum 230/115kV transformer #2

Potential Upgrades Not in the Base Case

Any potential upgrades that do not have a Notification to Construct (NTC) and not explicitly listed within this report have not been included in the base case. These upgrades include any identified in the SPP Extra-High Voltage (EHV) overlay plan, or any other SPP planning study other than the upgrades listed above in the previous section.

Regional Groupings

The interconnection requests listed in Appendix A were grouped together in fifteen different regional groups based on geographical and electrical impacts. These groupings are shown in Appendix C.

To determine interconnection impacts, fifteen different generation dispatch scenarios of the spring base case models were developed to accommodate the regional groupings.

Power Flow

For each group, the various wind generating plants were modeled at 100% nameplate of maximum generation. The other wind generating plants in each area were modeled at 80% nameplate while the wind generating plants in the other areas were modeled at 20% nameplate of maximum generation. These projects were dispatched as Energy Resources with equal distribution across the SPP footprint. Certain projects that requested Network Resource Interconnection Service were dispatched in an additional analysis into the balancing authority of the interconnecting transmission owner. This method allowed for the identification of network constraints that were common to the regional groupings that could then in turn have the mitigating upgrade cost allocated throughout the entire cluster. Other sensitivity analyses are also performed with all interconnection requests in each group being dispatched at 100% nameplate.

Peaking units were not dispatched in the 2013 spring model. To study peaking units' impacts, the 2014 summer and winter and 2018 summer and winter, and 2023 summer seasonal models were chosen and peaking units were modeled at 100% of the nameplate rating and wind generating facilities were modeled at 10% of the nameplate rating. Each interconnection request was also modeled separately at 100% nameplate for certain analyses.

Dynamic Stability

For each group, all interconnection requests were studied at 100% nameplate output while the other groups were dispatched at 20% output for wind requests and 100% output for thermal requests.

Identification of Network Constraints

The initial set of network constraints were found by using PTI MUST First Contingency Incremental Transfer Capability (FCITC) analysis on the entire cluster grouping dispatched at the various levels mentioned above. These constraints were then screened to determine if any of the generation interconnection requests had at least a 20% Distribution Factor (DF) upon the constraint. Constraints that measured at least a 20% DF from at least one interconnection request were considered for mitigation. Interconnection Requests that have requested Network Resource Interconnection Service (NRIS) were also studied in the NRIS analysis to determine if any constraint had at least a 3% DF. If so, these constraints were considered for mitigation.

Determination of Cost Allocated Network Upgrades

Cost Allocated Network Upgrades of wind generation interconnection requests were determined using the 2013 spring model. Cost Allocated Network Upgrades of peaking units was determined using the 2018 summer peak model. A MUST sensitivity analysis was performed to determine the Distribution Factors (DF), a distribution factor with no contingency that each generation interconnection request had on each new upgrade. The impact each generation interconnection request had on each upgrade project was weighted by the size of each request. Finally the costs due by each request for a particular project were then determined by allocating the portion of each request's impact over the impact of all affecting requests.

For example, assume that there are three Generation Interconnection requests, X, Y, and Z that are responsible for the costs of Upgrade Project '1'. Given that their respective PTDF for the project have been determined, the cost allocation for Generation Interconnection request 'X' for Upgrade Project 1 is found by the following set of steps and formulas:

- Determine an Impact Factor on a given project for all responsible GI requests:

$$\text{Request X Impact Factor on Upgrade Project 1} = \text{PTDF\%}(X) * \text{MW}(X) = X1$$

$$\text{Request Y Impact Factor on Upgrade Project 1} = \text{PTDF\%}(Y) * \text{MW}(Y) = Y1$$

$$\text{Request Z Impact Factor on Upgrade Project 1} = \text{PTDF\%}(Z) * \text{MW}(Z) = Z1$$

- Determine each request's Allocation of Cost for that particular project:

$$\text{Request X's Project 1 Cost} = \frac{\text{Network Upgrade Project 1 Cost}(\$) * X1}{X1 + Y1 + Z1}$$

- Repeat previous for each responsible GI request for each Project

The cost allocation of each needed Network Upgrade is determined by the size of each request and its impact on the given project. This allows for the most efficient and reasonable mechanism for sharing the costs of upgrades.

Credits for Amounts Advanced for Network Upgrades

Interconnection Customer shall be entitled to credits in accordance with Attachment Z2 of the SPP Tariff for any Network Upgrades including any tax gross-up or any other tax-related payments associated with the Network Upgrades, and not refunded to the Interconnection Customer.

Required Interconnection Facilities

The requirement to interconnect the 616.3 MW of generation into the existing and proposed transmission systems in the affected areas of the SPP transmission footprint consist of the necessary cost allocated shared facilities listed in Appendix F by upgrade. The interconnection requirements for the cluster total \$50,233,040.99. Interconnection Facilities specific to each generation interconnection request are listed in Appendix E. A preliminary one-line drawing for each generation interconnection request are listed in Appendix D.

A list of constraints that were identified and used for mitigation are listed in Appendix G. Listed within Appendix G are the ERIS constraints with greater than or equal to a 20% DF, as well as, the NRIS constraints that have a DF of 3% or greater. Other Network Constraints which are not requiring mitigation are shown in Appendix H. With a defined source and sink in a TSR, this list of Network Constraints will be refined and expanded to account for all Network Upgrade requirements.

Power Flow Analysis

Power Flow Analysis Methodology

The ACCC function of PSS/E was used to simulate single element and special (i.e., breaker-to-breaker, multi-element, etc) contingencies in portions or all of the modeled control areas of SPP, as well as, other control areas external to SPP and the resulting scenarios analyzed. NERC Category "B" and "C" contingencies were evaluated.

Power Flow Analysis

A power flow analysis was conducted for each Interconnection Customer's facility using modified versions of the 2013 spring peak, 2014 summer and winter peak, the 2018 summer and winter peak models, and the 2023 summer peak models. The output of the Interconnection Customer's facility was offset in each model by a reduction in output of existing online SPP generation. This method allows the request to be studied as an Energy Resource (ER) Interconnection Request. Certain requests that requested Network Resource Interconnection Service (NRIS) had an additional analysis conducted for displacing resources in the interconnecting Transmission Owner's balancing authority.

This analysis was conducted assuming that previous queued requests in the immediate area of these interconnect requests were in-service. The analysis of each Customer's project indicates that criteria violations will occur on the OKGE, SUNC/MKEC and SPS transmission systems under system intact and contingency conditions in the peak seasons.

Cluster Group 1 (Woodward Area)

In addition to the 4,953.8 MW of previously queued generation in the area, 0 MW of new interconnection service was studied. No new constraints were found in this area.

Cluster Group 2 (Hitchland Area)

In addition to the 3,180.2 MW of previously queued generation in the area, 0 MW of new interconnection service was studied. No new constraints were found in this area.

Cluster Group 3 (Spearville Area)

In addition to the 5,221.5 MW of previously queued generation in the area, 342.5 MW of new interconnection service was studied. Overloads around GEN-2012-002 were identified for the loss of the Holcomb 345/115kV autotransformer. Overloads of the Holcomb auto were identified in later years that were caused by all Group 3 projects. Withdrawal of the GEN-2012-012 request alleviated any possible voltage collapse issues for this study. The previously identified 345kV line from GEN-2011-017T to Post Rock 345kV is no longer required. Identified overloads on the Hickok 115kV line was due to an incorrect line rating on that line.

| MONITORED ELEMENT | RATE B (MVA) | TC% LOADING (% MVA) | CONTINGENCY |
|---|-----------------|---------------------------|--|
| HOLCOMB (HOLCOMB) 345/115/13.8KV TRANSFORMER CKT 1 | 336 | 101.4047 | G12_002T 115.00 - SCOTT CITY 115KV CKT 1 |

Cluster Group 4 (Mingo/NW Kansas Group)

In addition to the 2,188.1 MW of previously queued generation in the area, 101.2 MW of new interconnection service was studied. Overloads around GEN-2012-002 were identified for the loss of the Holcomb 345/115kV autotransformer.

| MONITORED ELEMENT | RATE B (MVA) | TC%LOADING (% MVA) | CONTINGENCY |
|---|-----------------|-----------------------|---|
| HOLCOMB (HOLCOMB) 345/115/13.8KV TRANSFORMER CKT 1 | 336 | 121.1041 | G12_002T 115.00 - SCOTT CITY 115KV CKT 1 |
| G12_002T 115.00 - SCOTT CITY 115KV CKT 1 | 198 | 124.3947 | HOLCOMB (HOLCOMB) 345/115/13.8KV TRANSFORMER CKT 1 |
| HOLCOMB (HOLCOMB) 345/115/13.8KV TRANSFORMER CKT 1 | 336 | 103.1935 | SCOTT CITY - SETAB 115KV CKT 1 |
| HOLCOMB (HOLCOMB) 345/115/13.8KV TRANSFORMER CKT 1 | 336 | 103.3371 | FLETCHER - HOLCOMB 115KV CKT 1 |

Cluster Group 5 (Amarillo Area)

In addition to the 1,572.6 MW of previously queued generation in the area, 0.0 MW of new interconnection service was studied. No new constraints were found in this area.

Cluster Group 6 (South Texas Panhandle/New Mexico)

In addition to the 2,460.3 MW of previously queued generation in the area, 131.2 MW of new interconnection service was studied. Outlet constraints of the Mustang 115kV bus were identified for generators at Mustang. Additionally, potential stability issues were identified for GEN-2012-001 for loss of the Grassland 230kV line from the wind farm.

| MONITORED ELEMENT | RATE B (MVA) | TC%LOADING (% MVA) | CONTINGENCY |
|---|-----------------|-----------------------|---|
| Non-Converged Contingency | 541 | - | G12_001T 230.00 - GRASSLAND INTERCHANGE 230KV CKT 1 |
| DENVER CITY INTERCHANGE N. - MUSTANG STATION N. 115KV CKT 1 | 309 | 104.4032 | DENVER CITY INTERCHANGE S. - MUSTANG STATION N. 115KV CKT 2 |
| DENVER CITY INTERCHANGE S. - MUSTANG STATION N. 115KV CKT 2 | 309 | 103.2311 | DENVER CITY INTERCHANGE N. - MUSTANG STATION N. 115KV CKT 1 |

Cluster Group 7 (Southwestern Oklahoma)

In addition to the 1,926.0 MW of previously queued generation in the area, 0.0 MW of new interconnection service was studied. No new constraints were found in this area.

Cluster Group 8 (South Central Kansas/North Oklahoma)

In addition to the 1,986.3 MW of previously queued generation in the area, 0.0 MW of new interconnection service was studied. No new constraints were found in this area.

Cluster Group 9/10 (Nebraska)

In addition to the 1,828.6 MW of previously queued generation in the area, 0.0 MW of new interconnection service was studied. No new constraints were found in this area.

Cluster Group 11 (North Central Kansas)

In addition to the 1,445.1 MW of previously queued generation in the area, 0 MW of new interconnection service was studied. No new constraints were found in this area.

Cluster Group 12 (Northwest Arkansas)

In addition to the 0 MW of previously queued generation in the area, 0.0 MW of new interconnection service was studied. No new constraints were found in this area.

Cluster Group 13 (Northwest Missouri)

In addition to the 585.6 MW of previously queued generation in the area, 0 MW of new interconnection service was studied. No new constraints were found in this area.

Cluster Group 14 (South Central Oklahoma)

In addition to the 420.8 MW of previously queued generation in the area, 41.4 MW of new interconnection service was studied. No new ERIS constraints were found in this area.

Cluster Group 15 (reserved)

This group has been retired and all prior Group 15 requests have been re-designated as Group 9/10 requests.

Stability Analysis

A stability analysis was conducted for each Interconnection Customer's facility using modified versions of the 2012 summer and 2012 winter peak models. The stability analysis was conducted with all upgrades in service that were identified in the power flow analysis. For each group, the interconnection requests were studied at 100% nameplate output while the other groups were dispatched at 20% output for wind requests and 100% output for fossil requests. The output of the Interconnection Customer's facility was offset in each model by a reduction in output of existing online SPP generation. The following synopsis is included for each group. The entire stability study for each group can be found in the Appendices.

Cluster Group 1 (Woodward Area)

There was no stability analysis conducted in the Woodward area due to no requests in the area.

Cluster Group 2 (Hitchland Area)

There was no stability analysis conducted in the Hitchland area due to no requests in the area.

Cluster Group 3 (Spearville Area)

The Group 3 stability analysis for this study was performed by SPP Staff. Stability analysis has determined that with the withdrawal of GEN-2012-012 that Group 3 projects no longer require the addition of a second 345 kV line between G11-017 POI and Post Rock. Additionally, it was determined that the once proposed Rubart-Amoco 115kV line is not required for interconnection for the GEN-2012-007 request. Once the previously assigned upgrades are placed in service the transmission system will remain stable and low voltage ride through requirements are satisfied for the contingencies studied.

With the power factor requirements and all network upgrades in service, all interconnection requests in Group 3 will meet FERC Order #661A low voltage ride through (LVRT) requirements.

Power Factor Requirements:

| Request | Size (MW) | Generator Model | Point of Interconnection | Power Factor Requirement at POI | |
|---------------|------------------------------|--------------------|--|------------------------------------|------------------------|
| | | | | Lagging (supplying) | Leading (absorbing) |
| ASGI-2012-006 | 21.21 Winter 20.74 Summer | GENSAL | Hugoton 115kV (562114) | 0.95 | 0.95 |
| GEN-2012-007 | 120.0 Winter 96.0 Summer | GENSAL | Rubart 115kV (562116) | 0.95 | 0.95 |
| GEN-2012-011 | 200.0 | GE 1.6MW | Tap Spearville – Post Rock 345kV (576704) | 0.95 | 0.95 |

*As reactive power is required for all projects, the final requirement in the GIA will be the pro-forma 95% lagging to 95% leading at the point of interconnection.

Cluster Group 4 (Mingo Area)

The Group 4 stability analysis was not re-performed for this study. Previous power factor requirements are listed below.

Power Factor Requirements:

| Request | Size (MW) | Generator Model | Point of Interconnection | Power Factor Requirement at POI | |
|--------------|--------------|--------------------|---|------------------------------------|------------------------|
| | | | | Lagging (supplying) | Leading (absorbing) |
| GEN-2012-002 | 101.2 | Siemens 2.3MW | Tap Pile – Scott City 115kV (562110) | 0.95 | 0.95 |

*As reactive power is required for all projects, the final requirement in the GIA will be the pro-forma 95% lagging to 95% leading at the point of interconnection.

Cluster Group 5 (Amarillo Area)

There was no stability analysis conducted in the Amarillo area due to no requests in the area.

Cluster Group 6 (South Texas Panhandle/New Mexico)

The Group 6 stability analysis for this study was performed by SPP Staff. Stability analysis has determined that GEN-2012-001 still requires the addition of 24 MVAR capacitor bank on its 34.5 kV bus. Additionally, a reactor bank of approximately 6 Mvars is also required after the Sharyland Utilities transmission system is integrated into the ERCOT system in 2014. With the previously allocated Power System Stabilizers (PSS) on certain units within the Southwestern Public Service (SPS) Balancing Authority, the additional reactive support at GEN-2012-001, and with the addition of previously assigned network upgrades, the 131.2 MW of new generation interconnection requests can be accommodated. Once the previously assigned upgrades are placed in service (these upgrades include the Tucu-Woodward 345kV line and the Hitchland-Woodward double circuit 345kV line as well as the Grassland-Wolfforth 230kV line) the transmission system will remain stable and low voltage ride through requirements are satisfied for the contingencies studied.

With the power factor requirements and all network upgrades in service, all interconnection requests in Group 6 will meet FERC Order #661A low voltage ride through (LVRT) requirements.

Power Factor Requirements:

| Request | Size (MW) | Generator Model | Point of Interconnection | Power Factor Requirement at POI | |
|--------------|--------------|--------------------|--|------------------------------------|------------------------|
| | | | | Lagging (supplying) | Leading (absorbing) |
| GEN-2012-001 | 61.2 | CCWE 3.6MW | Tap Borden – Grassland 230kV (562089) | 0.95 | 0.95 |
| GEN-2012-008 | 40 | GENROU | Mustang 115kV (527146) | 0.95 | 0.95 |
| GEN-2012-009 | 15 | GENROU | Mustang 230kV (527151) | 0.95 | 0.95 |
| GEN-2012-010 | 15 | GENROU | Mustang 230kV (527151) | 0.95 | 0.95 |

*As reactive power is required for all projects, the final requirement in the GIA will be the pro-forma 95% lagging to 95% leading at the point of interconnection.

Cluster Group 7 (Southwest Oklahoma Area)

There was no stability analysis conducted in the Southwest Oklahoma area due to no requests in the area.

Cluster Group 8 (South Central Kansas/North Oklahoma)

There was no stability analysis conducted in the South Central Kansas/North Oklahoma area due to no requests in the area.

Cluster Group 9/10 (Nebraska)

There was no stability analysis conducted in the Nebraska area due to no requests in the area.

Cluster Group 11 (North Central Kansas Area)

There was no stability analysis conducted in the North Central Kansas area due to no requests in the area.

Cluster Group 12 (Northwest Arkansas Area)

There was no stability analysis conducted in the Northwest Arkansas area due to no requests in the area.

Cluster Group 13 (Northwest Missouri Area)

There was no stability analysis conducted in the Northwest Missouri area due to no requests in the area.

Cluster Group 14 (South Central Oklahoma)

The Group 14 stability analysis was not performed for this study. Previous power factor requirements are listed below.

Power Factor Requirements:

| Request | Size (MW) | Generator Model | Point of Interconnection | Power Factor Requirement at POI | |
|--------------|--------------|--------------------|--|------------------------------------|------------------------|
| | | | | Lagging (supplying) | Leading (absorbing) |
| GEN-2012-004 | 41.4 | Siemens 2.3MW | Tap Ratliff – Pooleville 138kV (562038) | 0.95 | 0.95 |

*As reactive power is required for all projects, the final requirement in the GIA will be the pro-forma 95% lagging to 95% leading at the point of interconnection.

Cluster Group 15 (reserved)

This group has been retired and all prior Group 15 requests have been re-designated as Group 9/10 requests.

Conclusion

The minimum cost of interconnecting 616.3 MW of new interconnection requests included in this Definitive Interconnection System Impact Study is estimated at \$50,233,040.99 for the Allocated Network Upgrades and Transmission Owner Interconnection Facilities are listed in Appendix E and F. These costs do not include the cost of upgrades of other transmission facilities listed in Appendix H which are Network Constraints.

These interconnection costs do not include any cost of Network Upgrades determined to be required by short circuit analysis. These studies will be performed if the Interconnection Customer executes the appropriate Interconnection Facilities Study Agreement and provides the required data along with demonstration of Site Control and the appropriate deposit. At the time of the Interconnection Facilities Study, a better determination of the interconnection facilities may be available.

The required interconnection costs listed in Appendices E, and F, and other upgrades associated with Network Constraints do not include all costs associated with the deliverability of the energy to final customers. These costs are determined by separate studies if the Customer submits a Transmission Service Request (TSR) through SPP's Open Access Same Time Information System (OASIS) as required by Attachment Z1 of the SPP Open Access Transmission Tariff (OATT).

E: Cost Allocation per Interconnection Request (Including Prior Queued Upgrades)

Important Note:

****WITHDRAWAL OF HIGHER QUEUED PROJECTS WILL CAUSE A RESTUDY
AND MAY RESULT IN HIGHER INTERCONNECTION COSTS****

This section shows each Generation Interconnection Request Customer, their current study impacted Network Upgrades, and the previously allocated upgrades upon which they rely to accommodate their interconnection to the transmission system.

The costs associated with the current study Network Upgrades are allocated to the Customers shown in this report.

In addition should a higher queued request, defined as one this study includes as a prior queued request, withdraw, the Network Upgrades assigned to the withdrawn request may be reallocated to the remaining requests that have an impact on the Network Upgrade under a restudy. Also, should a Interconnection Request choose to go into service prior to the operation date of any necessary Network Upgrades, the costs associated with those upgrades may be reallocated to the impacted Interconnection Request. The actual costs allocated to each Generation Interconnection Request Customer will be determined at the time of a restudy.

The required interconnection costs listed do not include all costs associated with the deliverability of the energy to final customers. These costs are determined by separate studies if the Customer submits a Transmission Service Request through SPP's Open Access Same Time Information System (OASIS) as required by Attachment Z1 of the SPP OATT. In addition, costs associated with a short circuit analysis will be allocated should the Interconnection Request Customer choose to execute a Facility Study Agreement.

Appendix E. Cost Allocation Per Request

(Including Previously Allocated Network Upgrades*)

| Interconnection Request and Upgrades | Upgrade Type | Allocated Cost | Upgrade Cost |
|--|----------------------|------------------|-----------------|
| ASGI-2012-006 | | | |
| ASGI-2012-006 Interconnection Costs See Oneline Diagram. | Current Study | \$1,000,000.00 | \$1,000,000.00 |
| Holcomb 345/115/13.8kV Transformer Build second 345/115/13.8kV Transformer | Current Study | \$1,721,099.82 | \$15,000,000.00 |
| Beaver County - Buckner 345kV CKT 1 Build approximately 90 miles of 345kV from Beaver County - Gray County @ 3000 amps | Previously Allocated | \$170,209,050.00 | |
| Beaver County - Woodward 345kV CKT 1 Priority Project: Hitchland - Woodward Dbl 345kV CKT (Total Project E&C Cost Shown) | Previously Allocated | \$226,040,727.00 | |
| Beaver County 345kV Expansion Beaver County Expansion: Tap & Tie in Hitchland - Woodward 345kV CKT 2 | Previously Allocated | \$3,500,000.00 | |
| Clark - Thistle 345KV Dbl CKT Priority Project: Spearville - Clark - Thistle Dbl 345kV CKT (Total Project E&C Cost Shown.) | Previously Allocated | \$291,088,130.00 | |
| Finney Switching Station - Holcomb 345kV CKT 2 Per GEN-2006-049 Facility Study | Previously Allocated | \$10,507,445.00 | |
| Fort Dodge - North Fort Dodge 115kV CKT 2 Construct approximately 1 mile of new 115kV for 2nd circuit | Previously Allocated | \$6,113,000.00 | |
| Hitchland - Beaver County 345kV CKT 1 Priority Project: Hitchland - Woodward Dbl 345kV CKT (Total Project E&C Cost Shown) | Previously Allocated | \$226,040,727.00 | |
| Hitchland 345/230kV Autotransformer CKT 2 Priority Project: Hitchland 345/230kV Autotransformer CKT 2 (Total Project E&C Cost Shown). | Previously Allocated | \$8,883,760.00 | |
| Matthewson - Cimarron 345kV CKT 2 Build second 345kV circuit from Matthewson - Cimarron @ 3000 amps | Previously Allocated | \$42,903,753.00 | |
| Mullergren - Reno 345kV Dbl CKT Build approximately 92 miles of new Dbl 345kV circuit from Mullergren - Reno @ 3000 amps | Previously Allocated | \$210,887,465.33 | |
| North Fort Dodge - Spearville 115kV CKT 2 DIS-2009-001-1 upgrade. | Previously Allocated | \$9,660,000.00 | |
| Spearville - Clark 345KV Dbl CKT Priority Project: Spearville - Clark - Thistle Dbl 345kV CKT (Total Project E&C Cost Shown.) | Previously Allocated | \$291,088,130.00 | |

* Withdrawal of higher queued projects will cause a restudy and may result in higher costs

| Interconnection Request and Upgrades | Upgrade Type | Allocated Cost | Upgrade Cost |
|--|----------------------|-----------------------|---------------------|
| Spearville - Mullergren 345kV Dbl CKT Build approximately 85 miles of new Dbl 345kV circuit from Spearville - Mullergren @ 3000 amps | Previously Allocated | \$196,323,921.67 | |
| Spearville 345/115/13.8kV Transformer CKT 1 New 345/115kV Spearville Transformer (Partial Cost allocation) | Previously Allocated | \$3,745,000.00 | |
| Tatonga - Mathewson 345kV CKT 2 Build second 345kV circuit from Tatonga - Mathewson @ 3000 amps | Previously Allocated | \$104,260,473.00 | |
| Thistle - Wichita 345KV Dbl CKT Priority Project: Thistle - Wichita Dbl 345kV CKT (Total Project E&C Cost Shown.) | Previously Allocated | \$166,598,000.00 | |
| Woodward XFMR 345/138/13.8kV CKT 2 Balanced Portfolio: Woodward 345/138kV Transformer CKT 2 & 50 MVAR Reactor (Total Project E&C Cost Shown.) | Previously Allocated | \$15,000,000.00 | |
| Current Study Total | | \$2,721,099.82 | |

F: Cost Allocation per Proposed Study Network Upgrade

Important Note:

****WITHDRAWAL OF HIGHER QUEUED PROJECTS WILL CAUSE A RESTUDY
AND MAY RESULT IN HIGHER INTERCONNECTION COSTS****

This section shows each Direct Assigned Facility and Network Upgrade and the Generation Interconnection Request Customer(s) which have an impact in this study assuming all higher queued projects remain in the queue and achieve commercial operation.

The required interconnection costs listed do not include all costs associated with the deliverability of the energy to final customers. These costs are determined by separate studies if the Customer submits a Transmission Service Request through SPP's Open Access Same Time Information System (OASIS) as required by Attachment Z1 of the SPP OATT. In addition, costs associated with a short circuit analysis will be allocated should the Interconnection Request Customer choose to execute a Facility Study Agreement.

There may be additional costs allocated to each Customer. See Appendix E for more details.

Appendix F. Cost Allocation by Upgrade

| | |
|--|------------------------|
| ASGI-2012-006 Interconnection Costs | \$1,000,000.00 |

Interconnection Studies***

DISIS-2012-001-1 Group 3

February 2013

Executive Summary

A transient stability restudy has been performed by the Southwest Power Pool (SPP) to analyze the interconnection requests in the Definitive Interconnection System Impact Study (DISIS) 2012-001-1 for Group 3 in the Spearville, Oklahoma area. This restudy was performed due to a project withdrawal in Group 3 subsequent to the DISIS-2012-001 that was posted on July 26, 2012.

This restudy evaluated three (3) Interconnection Requests:

1. GEN-2012-007,
2. GEN-2012-011, and
3. ASGI-2012-006 (formerly, GEN-2012-003)

The results of the stability analysis determined that for the addition of the DISIS-2012-001-1 Group 3 interconnection requests, the transmission system was found to remain stable for both summer and winter peak conditions. The study showed that the following lines are not required for stability:

1. Rubart to Amoco 115kV, ckt 1
2. G11-017 to Post Rock 345kV, ckt 2

The power factor analysis that was performed for Group 3 in DISIS-2012-001 remains valid. Therefore, a power factor analysis was not done for this study.

Should any previously queued projects that were included in this restudy withdraw from the queue, then this System Impact Study may have to be revised to determine the impacts of these Interconnection Customers' projects on transmission facilities.

1.0 Introduction

A transient stability restudy has been performed by the Southwest Power Pool (SPP) to analyze the interconnection requests in the Definitive Interconnection System Impact Study (DISIS) 2012-001-1 for Group 3 in the Spearville, Oklahoma area. This restudy was performed due to a project withdrawal in Group 3 subsequent to the DISIS-2012-001 that was posted on July 26, 2012.

2.0 Purpose

The purpose of this Definitive Interconnection System Impact Study (DISIS) is to evaluate the impact of the proposed interconnection on the reliability of the Transmission System. Table 1 below lists the requests that were analyzed in this restudy.

Two seasonal base cases were used in the restudy to analyze the stability impacts of the proposed generation facilities. A 2014 summer peak case and a 2014 winter peak case were modified to include the prior queued projects shown in Table 2. These two study cases differ from the two study cases used in the DISIS-2012-001 in that the following lines are not in the current study cases:

1. Rubart to Amoco 115kV, ckt 1
2. G11-017 to Post Rock 345kV, ckt 2

Contingencies were developed to verify that these two lines are no longer required for stability.

Should any of the previously queued projects listed in Table 2 withdraw, then this System Impact Study may require a re-study of this request at the expense of the customer.

Table 1: DISIS-2012-001 Interconnection Request Table

| Request | Size (MW) | PSS/E Model | Point of Interconnection |
|---|------------------------------|-------------|---|
| GEN-2012-007 | 96 Summer 120 Winter | GENSAL | Rubart 115kV (562116) |
| GEN-2012-011 | 200 | GE 1.6MW | Tap on Spearville – Post Rock 345kV line (G11-017 POI, 562334) |
| ASGI-2012-006 (formerly, GEN-2012-003) | 20.74 Summer 21.21 Winter | GENSAL | Tap on Rolla – Hugoton 69kV (562114) |

Table 2: DISIS-2012-001 Prior Queued Request Table

| Request | Size (MW) | PSS/E Model | Point of Interconnection |
|---------------|-----------|---------------|------------------------------|
| GEN-2001-039A | 104 | GE 1.6MW | Shooting Star 115kV (539763) |
| GEN-2002-025A | 150 | GE 1.5 MW | Spearville 230kV (539695) |
| GEN-2004-014 | 154.5 | GE 1.5 MW | Spearville 230kV (539695) |
| GEN-2005-012 | 250.7 | Siemens 2.3MW | Spearville 345kV (531469) |
| GEN-2006-006 | 205.5 | GE 1.5 MW | Spearville 345kV (531469) |
| GEN-2006-021 | 100 | Clipper 2.5MW | Flat Ridge 138kV (539638) |
| GEN-2006-022 | 150 | Clipper 2.5MW | Pratt 115kV (539687) |

| Request | Size (MW) | PSS/E Model | Point of Interconnection |
|----------------|----------------------|--------------------|--|
| GEN-2007-038 | 200 | Clipper 2.5MW | Spearville 345kV (531469) |
| GEN-2007-040 | 200.1 | Siemens 2.3MW | Buckner 345kV (531501) |
| GEN-2008-018 | 405 | GE 1.5 MW | Finney 345kV (523853) |
| GEN-2008-079 | 98.9 | Siemens 2.3MW | Tap on Cudahy – Fort Dodge 115kV line (560229) |
| GEN-2008-124 | 200.1 | Siemens 2.3MW | Spearville 345kV (531469) |
| GEN-2010-009 | 165.6 | Siemens 2.3MW | Buckner 345kV (531501) |
| GEN-2010-015 | 200.1 | Siemens 2.3MW | Spearville 345kV (531469) |
| GEN-2010-029 | 450 | Vestas V90 1.8MW | Spearville 345kV (531469) |
| GEN-2010-045 | 197.8 | Siemens 2.3MW | Buckner 345kV (531501) |
| GEN-2010-061 | 179.4 | Siemens 2.3MW | Tap on Spearville – Post Rock 345kV line (G11-017 POI, 560242) |
| GEN-2011-008 | 600 | GE 1.6MW | Clark County 345kV (539800) |
| GEN-2011-016 | 200.1 | Siemens 2.3MW | Spearville 345kV (531469) |
| GEN-2011-017 | 299 | Siemens 2.3MW | Tap on Spearville – Post Rock 345kV line (G11-017 POI, 560242) |
| GEN-2011-023 | 299 | Siemens 2.3MW | Clark County 345kV (539800) |
| GEN-2011-043 | 149.5 | Siemens 2.3MW | Thistle 345kV (539801) |
| GEN-2011-044 | 149.5 | Siemens 2.3MW | Thistle 345kV (539801) |

3.0 Facilities

3.1 Interconnection Facility

The interconnection facilities for each of the projects in Table 1 are shown in Figures 1 through 3.

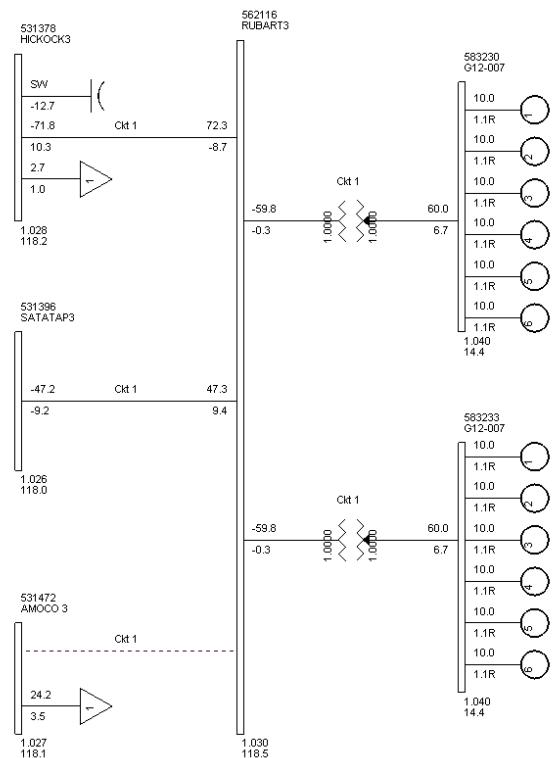

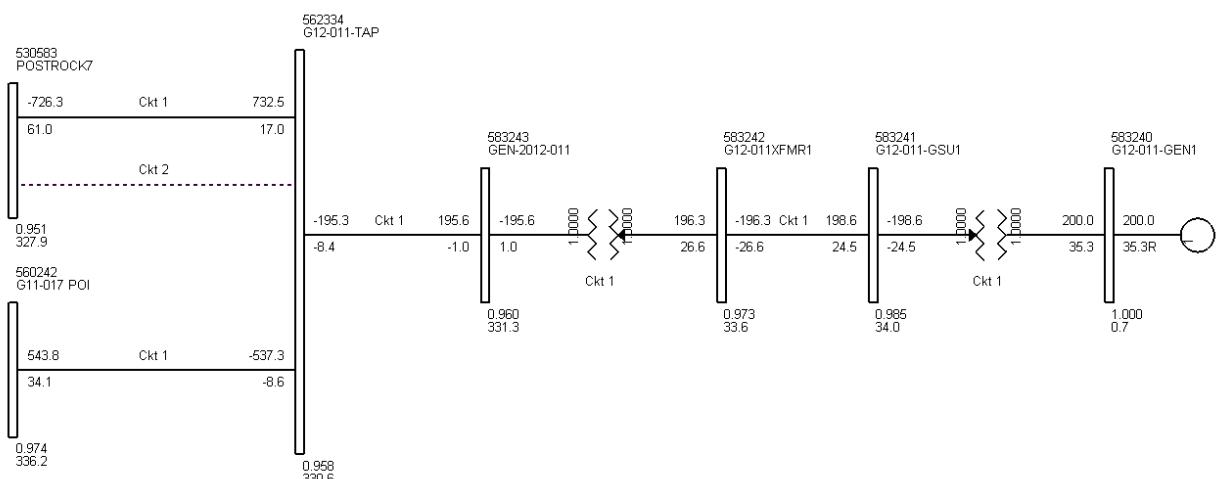

Figure 1: GEN-2012-007 Facility One-line Diagram

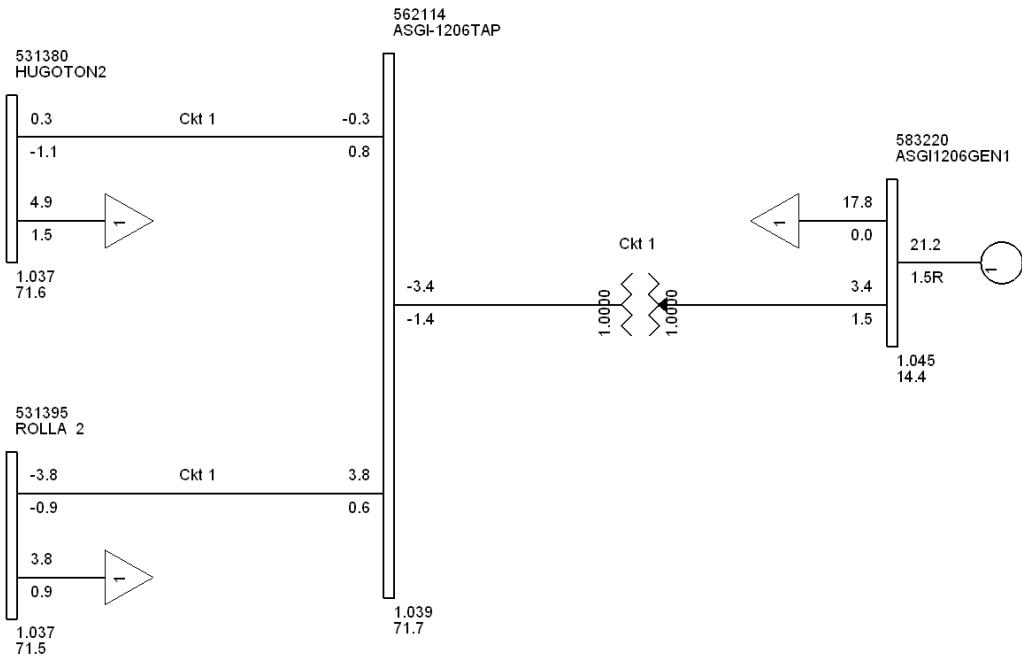

Figure 3: ASGI-2012-006 Facility One-line Diagram

4.0 Stability Study Analysis

Fifteen (15) contingencies were considered for the transient stability simulations. These contingencies included three phase faults and single phase line faults at locations defined by SPP. Single-phase line faults were simulated by applying a fault impedance to the positive sequence network at the fault location to represent the effect of the negative and zero sequence networks on the positive sequence network. The fault impedance was computed to give a positive sequence voltage at the specified fault location of approximately 60% of pre-fault voltage. This method is in agreement with SPP current practice. The faults that were defined and simulated are listed in Table 3 below. The faults were simulated on both the summer peak and the winter peak models.

In this restudy SPP monitored the generators and transmission lines in Areas 520, 524, 525, 526, 531, 534, 536, 640, 645, 650, and 652.

Table 3: Contingency List

| Cont. No. | Cont. Name | Description |
|-----------|------------|---|
| 1 | FLT01_3PH | <p>3 phase fault on the Rubart (562116) to Hickock (531378) 115 kV line, near Rubart.</p> <p>a. Apply fault at the Rubart 115kV bus.</p> <p>b. Clear fault after 5 cycles by tripping the faulted line.</p> <p>c. Wait 20 cycles, and then re-close the line in (b) back into the fault.</p> <p>d. Leave fault on for 5 cycles, then trip the line in (b) and remove fault.</p> |
| 2 | FLT02_1PH | <i>Single phase fault and sequence like previous</i> |

| | | |
|----|-----------|---|
| 3 | FLT03_3PH | 3 phase fault on the Rubart (562116) to Sata Tap (531396) 115 kV line, near Rubart. a. Apply fault at the Rubart 115kV bus. b. Clear fault after 5 cycles by tripping the faulted line. c. Wait 20 cycles, and then re-close the line in (b) back into the fault. d. Leave fault on for 5 cycles, then trip the line in (b) and remove fault. |
| 4 | FLT04_1PH | <i>Single phase fault and sequence like previous</i> |
| 5 | FLT05_3PH | 3 phase fault on the Hickock (531378) to Pioneer (531391) 115 kV line, near Hickock. a. Apply fault at the Hickock 115kV bus. b. Clear fault after 5 cycles by tripping the faulted line. c. Wait 20 cycles, and then re-close the line in (b) back into the fault. d. Leave fault on for 5 cycles, then trip the line in (b) and remove fault. |
| 6 | FLT06_1PH | <i>Single phase fault and sequence like previous</i> |
| 7 | FLT07_3PH | 3 phase fault on the Hickock (531378) to Amoco (531472) 115 kV line, near Hickock. a. Apply fault at the Hickock 115kV bus. b. Clear fault after 5 cycles by tripping the faulted line. c. Wait 20 cycles, and then re-close the line in (b) back into the fault. d. Leave fault on for 5 cycles, then trip the line in (b) and remove fault. |
| 8 | FLT08_1PH | <i>Single phase fault and sequence like previous</i> |
| 9 | FLT09_3PH | 3 phase fault on the Sata Tap (531396) to Pioneer Tap (531392) 115 kV line, near Sata Tap. a. Apply fault at the Sata Tap 115kV bus. b. Clear fault after 5 cycles by tripping the faulted line. c. Wait 20 cycles, and then re-close the line in (b) back into the fault. d. Leave fault on for 5 cycles, then trip the line in (b) and remove fault. |
| 10 | FLT10_1PH | <i>Single phase fault and sequence like previous</i> |
| 11 | FLT11_3PH | 3 phase fault on the Pioneer Tap (531392) to Plymell (531393) 115 kV line, near Pioneer Tap. a. Apply fault at the Pioneer Tap 115kV bus. b. Clear fault after 5 cycles by tripping the faulted line. c. Wait 20 cycles, and then re-close the line in (b) back into the fault. d. Leave fault on for 5 cycles, then trip the line in (b) and remove fault. |
| 12 | FLT12_1PH | <i>Single phase fault and sequence like previous</i> |
| 13 | FLT13_3PH | 3 phase fault on the Hickock (531378) 115kV to Hickock (531377) 69kV to Hickock (531250) 13.8kV three winding transformer, near Hickock 115kV. a. Apply fault at the Hickock 115kV bus. b. Clear fault after 5 cycles by clearing the fault and tripping the faulted three winding transformer. |
| 14 | FLT53_3PH | 3 phase fault on the Woodward (515375) to G11-051-Tap (562075) 345kV line, near Woodward. a. Apply fault at the Woodward 345kV bus. b. Clear fault after 5 cycles by tripping the faulted line. c. Wait 20 cycles, and then re-close the line in (b) back into the fault. d. Leave fault on for 5 cycles, then trip the line in (b) and remove fault. |
| 15 | FLT79_3PH | 3 phase fault on the Postrock (530583) to G12-011-POI (562334) 345kV line, near Postrock. a. Apply fault at the Postrock 345kV bus. b. Clear fault after 5 cycles by tripping the faulted line. c. Wait 20 cycles, and then re-close the line in (b) back into the fault. d. Leave fault on for 5 cycles, then trip the line in (b) and remove fault. |

5.0 Simulation Results

All faults were run for both summer and winter cases and no tripping occurred in this study, and the transmission system remained stable.

Table 4 summarizes the results for all faults. Complete sets of plots for summer and winter cases are available on request.

Based on the dynamic results, with all network upgrades in service, all the requests in Group 3 did not cause any stability problems and remained stable for all faults studied.

Table 4: Contingency Simulation Results

| Cont. No. | Cont. Name | Description | Summer | Winter |
|-----------|------------|--|--------|--------|
| 1 | FLT01_3PH | 3 phase fault on the Rubart (562116) to Hickock (531378) 115 kV line, near Rubart. | STABLE | STABLE |
| 2 | FLT02_1PH | <i>Single phase fault and sequence like previous</i> | STABLE | STABLE |
| 3 | FLT03_3PH | 3 phase fault on the Rubart (562116) to Sata Tap (531396) 115 kV line, near Rubart. | STABLE | STABLE |
| 4 | FLT04_1PH | <i>Single phase fault and sequence like previous</i> | STABLE | STABLE |

6.0 Power Factor Analysis

A power factor analysis was not performed in this restudy since the power factor analysis reported in DISIS-2012-001 (posted July 26, 2012) is still valid.

7.0 Conclusion

A transient stability restudy has been performed by the Southwest Power Pool (SPP) to evaluate the interconnection requests in the DISIS-2010-001-1 for Group 3 in the Spearville, Oklahoma area.

The results of a stability analysis determined that for the addition of the DISIS-2010-001-1 Group 3 interconnection requests, the transmission system was found to remain stable for both summer and winter peak conditions with all required network upgrades in service. The study showed that the following lines are not required for stability:

1. Rubart to Amoco 115kV, ckt 1
2. G11-017 to Post Rock 345kV, ckt 2

The power factor analysis that was performed for Group 3 in DISIS-2012-001 remains valid. Therefore, a power factor analysis was not done for this study.

If any previously queued projects that were included in this study drop out, then this System Impact Study may have to be revised to determine the impacts of this Interconnection Customer's project on transmission facilities. In accordance with FERC and SPP procedures, the study cost for restudy shall be borne by the Interconnection Customer.

DISIS-2012-001-1 Group 6

February 2013

Executive Summary

A transient stability restudy has been performed by the Southwest Power Pool (SPP) to analyze the interconnection requests in the Definitive Interconnection System Impact Study (DISIS) 2012-001-1 for Group 6 in the Grassland, Texas area. This restudy was performed due to a project withdrawal in Group 6 subsequent to the DISIS-2012-001 that was posted on July 26, 2012. Also this restudy was performed due to voltage issues seen in the power flow results with GEN-2012-001 operating at 10% nameplate in the summer and winter seasons.

This restudy evaluated four (4) Interconnection Requests:

1. GEN-2012-001,
2. GEN-2012-008,
3. GEN-2012-009, and
4. GEN-2012-010

The results of the stability analysis determined that for the addition of the DISIS-2012-001-1 Group 6 interconnection requests, the transmission system was found to remain stable for both summer and winter peak condition when GEN-2012-001 is operating at 100% nameplate. The results of the stability analysis determined GEN-2012-001 Tap – Grassland faults are not stable when GEN-2012-001 is operating in low wind conditions (i.e. 10% nameplate). It was determined that the Customer, GEN-2012-001 will need to install a 6MVar reactor bank in addition to the previously required 24Mvar capacitor bank at their facility to relieve overvoltage issue seen during low wind operation of GEN-2012-001. The study showed that the following line is not required to be accelerated from its need date (3/1/2018) for stability for the above Generation Interconnection Requests:

1. Grassland – Wolfforth 230kV ckt 1 (SPP-NTC-50404)

Grassland – Wolfforth 230kV ckt was accelerated in the original DISIS-2012-001 group 6 stability analysis since a higher queued project had a need for the upgrade.

The power factor analysis that was performed for Group 6 in DISIS-2012-001 remains valid. Therefore, a power factor analysis was not done for this study.

Should any previously queued projects that were included in this restudy withdraw from the queue, then this System Impact Study may have to be revised to determine the impacts of these Interconnection Customers' projects on transmission facilities.

1.0 Introduction

A transient stability restudy has been performed by the Southwest Power Pool (SPP) to analyze the interconnection requests in the Definitive Interconnection System Impact Study (DISIS) 2012-001-1 for Group 6 in the Grassland, Texas area. This restudy was performed due to a project withdrawal in Group 6 subsequent to the DISIS-2012-001 that was posted on July 26, 2012. Also this restudy was performed due to voltage issues seen in the power flow results with GEN-2012-001 operating during low wind conditions (i.e. 10% nameplate) in the summer and winter seasons.

2.0 Purpose

The purpose of this Definitive Interconnection System Impact Study (DISIS) is to evaluate the impact of the proposed interconnection on the reliability of the Transmission System. Table 1 below lists the requests that were analyzed in this restudy.

Two seasonal base cases were used in the restudy to analyze the stability impacts of the proposed generation facilities. A 2014 summer peak case and a 2014 winter peak case were modified to include the prior queued projects shown in Table 2. These two study cases differ from the two study cases used in the DISIS-2012-001 in that the following lines are not in the current study cases:

1. Grassland – Wolfforth 230kV ckt 1 (SPP-NTC-50404)

Contingencies were developed to verify that these two lines are no longer required for stability.

Should any of the previously queued projects listed in Table 2 withdraw, then this System Impact Study may require a re-study of this request at the expense of the customer.

Table 1: DISIS-2012-001 Interconnection Request Table

| Request | Size (MW) | PSS/E Model | Point of Interconnection |
|--------------|-----------|------------------|--|
| GEN-2012-001 | 61.2 | CCWE 3.6MW (WT4) | Tap Grassland - Borden 230kV (G12-001 POI, 562089) |
| GEN-2012-008 | 40 | GENROU | Mustang 115kV & 230kV (527146,527151) |
| GEN-2012-009 | 15 | GENROU | Mustang 230kV (527151) |
| GEN-2012-010 | 15 | GENROU | Mustang 230kV (527151) |

Table 2: DISIS-2012-001 Prior Queued Request Table

| Request | Size (MW) | PSS/E Model | Point of Interconnection |

| ASGI-2011-004 | 19.2MW | GE 1.6MW | Crosby 69kV (525925) |

3.0 Facilities

3.1 Interconnection Facility

The interconnection facilities for each of the projects in Table 1 are shown in Figure 1 and Figure 2.

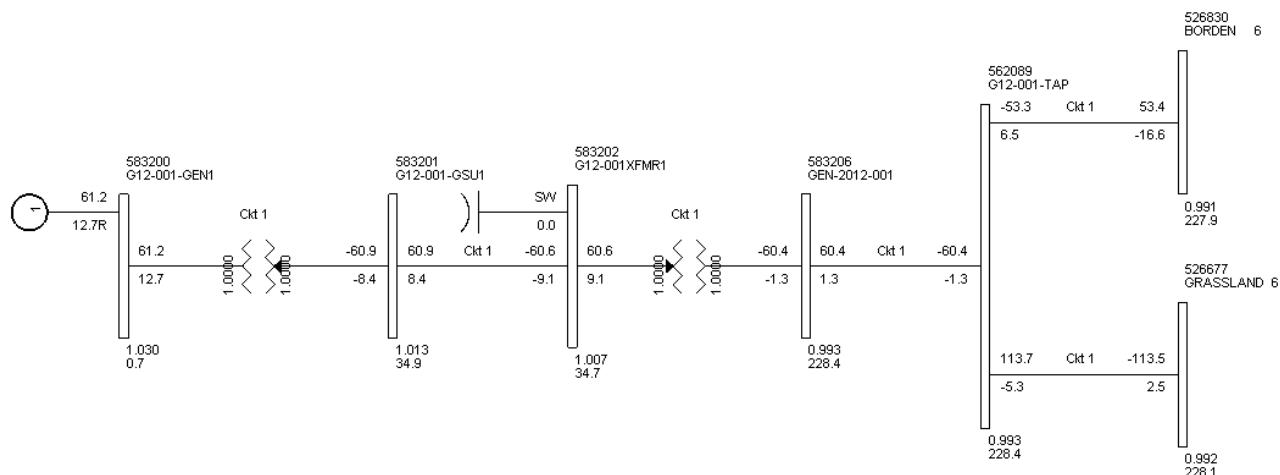

Figure 1: GEN-2012-001 Facility One-line Diagram

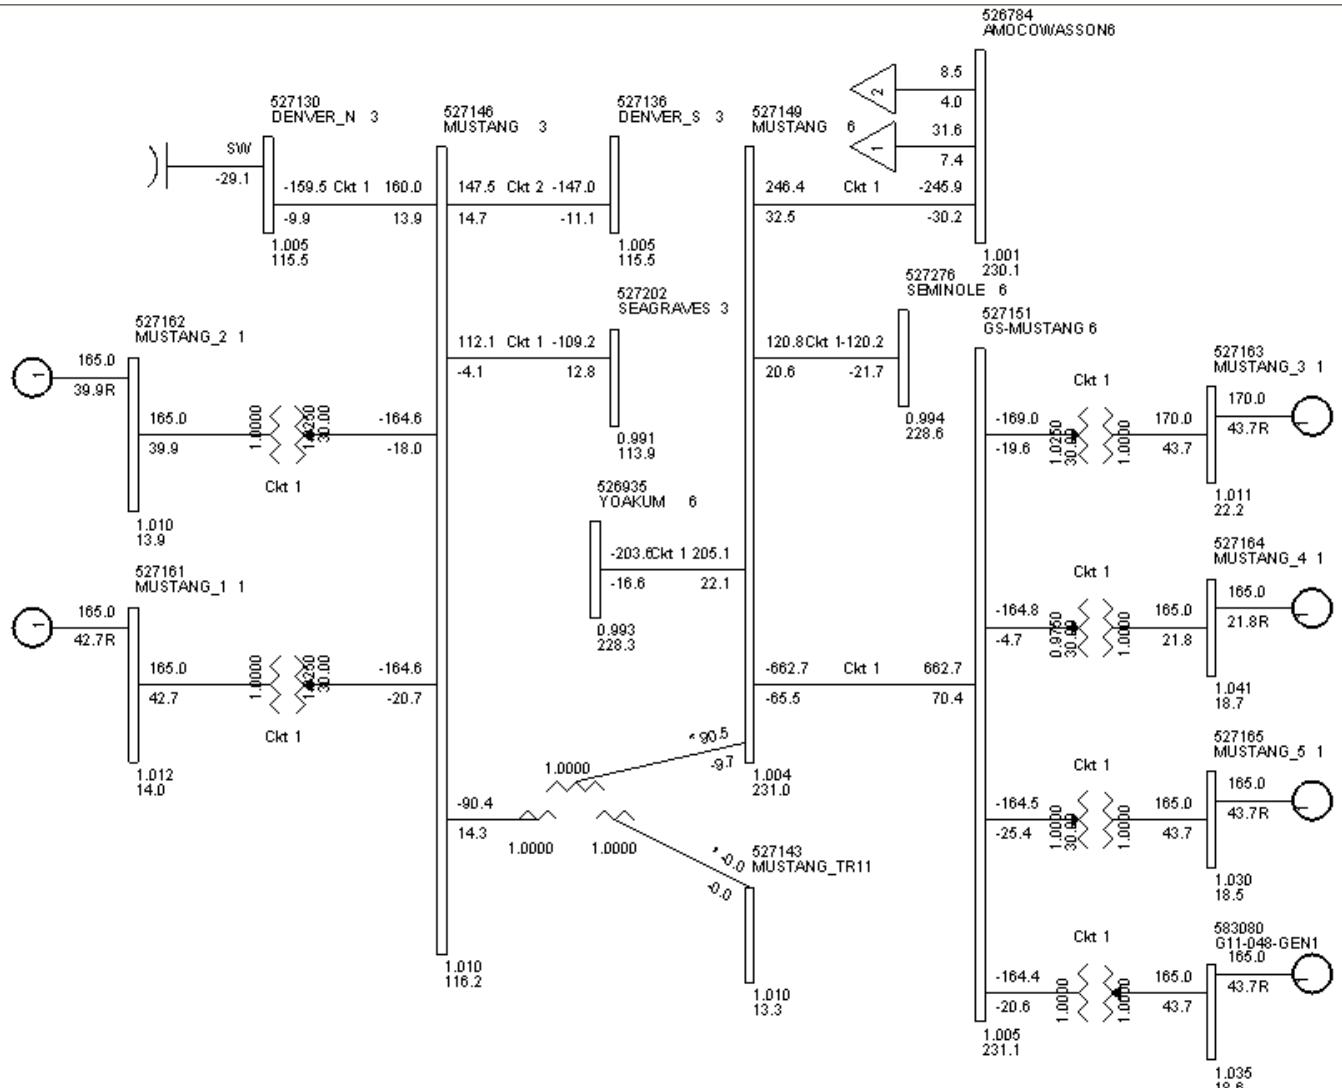

Figure 2: GEN-2012-008, GEN-2012-009, and GEN-2012-010 Facility One-line Diagram

4.0 Stability Study Analysis

Seven (7) contingencies were considered for the transient stability simulations. These contingencies included three phase faults and single phase line faults at locations defined by SPP. Single-phase line faults were simulated by applying a fault impedance to the positive sequence network at the fault location to represent the effect of the negative and zero sequence networks on the positive sequence network. The fault impedance was computed to give a positive sequence voltage at the specified fault location of approximately 60% of pre-fault voltage. This method is in agreement with SPP current practice. The faults that were defined and simulated are listed in Table 3 below. The faults were simulated on both the summer peak and the winter peak models.

In this restudy SPP monitored the generators and transmission lines in Areas 520, 524, 525, 526, 531, 534, 536, 640, 645, 650, and 652.

Table 3: Contingency List

| Cont. No. | Cont. Name | Description |
|-----------|------------|---|
| 1 | FLT01_3PH | 3 phase fault on the GEN-2012-001 Tap (562089) to Grassland (526677) 230kV line, near GEN-2012-001 Tap. a. Apply fault at the GEN-2012-001 Tap 230kV bus. b. Clear fault after 5 cycles by tripping the faulted line. c. Wait 20 cycles, and then re-close the line in (b) back into the fault. d. Leave fault on for 5 cycles, then trip the line in (b) and remove fault. |
| 2 | FLT02_1PH | <i>Single phase fault and sequence like previous</i> |
| 3 | FLT03_3PH | 3 phase fault on the GEN-2012-001 Tap (562089) to Borden (526830) 230kV line, near GEN-2012-001 Tap. a. Apply fault at the GEN-2012-001 Tap 230kV bus. b. Clear fault after 5 cycles by tripping the faulted line. c. Wait 20 cycles, and then re-close the line in (b) back into the fault. d. Leave fault on for 5 cycles, then trip the line in (b) and remove fault. |
| 4 | FLT04_1PH | <i>Single phase fault and sequence like previous</i> |
| 5 | FLT05_3PH | 3 phase fault on the Grassland (526677) to Jones (526337) 230 kV line, near Grassland. a. Apply fault at the Grassland 230kV bus. b. Clear fault after 5 cycles by tripping the faulted line. c. Wait 20 cycles, and then re-close the line in (b) back into the fault. d. Leave fault on for 5 cycles, then trip the line in (b) and remove fault. |
| 6 | FLT06_1PH | <i>Single phase fault and sequence like previous</i> |
| 7 | FLT07_3PH | 3 phase fault on the Grassland (526677) 230kV to Grassland (526676) 115kV to Grassland (526674) 13.2kV three winding transformer, near Grassland 230kV. a. Apply fault at the Grassland 230kV bus. b. Clear fault after 5 cycles by clearing the fault and tripping the faulted three winding transformer. |

5.0 Simulation Results

All faults were run for both summer and winter cases and no tripping occurred in this study, and the transmission system remained stable for GEN-2012-001 operating at 100% nameplate. GEN-2012-001 Tap – Grassland 230kV faults are not stable to do high voltage occurring during contingency. GEN-2012-001 will be required to install a 6MVar reactor bank to relieve the high voltage. GEN-2012-001 was already required to install a 24Mvar capacitor bank in earlier studies.

Table 4 summarizes the results for all faults. Complete sets of plots for summer and winter cases are available on request.

Table 5 summarizes the results for all faults. Complete sets of plots for summer and winter cases are available on request.

Based on the dynamic results, with all network upgrades in service, all the requests in Group 6 did not cause any stability problems and remained stable for all faults studied.

Table 4: Contingency Simulation Results with GEN-2012-001 at 100% Nameplate

| Cont. No. | Cont. Name | Description | Summer | Winter |

6.0 Power Factor Analysis

A power factor analysis was not performed in this restudy since the power factor analysis reported in DISIS-2012-001 (posted July 26, 2012) is still valid.

7.0 Conclusion

A transient stability restudy has been performed by the Southwest Power Pool (SPP) to evaluate the interconnection requests in the DISIS-2010-001-1 for Group 6 in the Grassland, Texas area.

The results of the stability analysis determined that for the addition of the DISIS-2012-001-1 Group 6 interconnection requests, the transmission system was found to remain stable for both summer and winter peak condition when GEN-2012-001 is operating at 100% nameplate. The results of the stability analysis determined GEN-2012-001 Tap – Grassland faults are not stable when GEN-2012-001 operates at 10% nameplate. It was determined that the Customer, GEN-2012-001 will need to install a 6MVar bank of reactors in addition to the previously required 24Mvar capacitor banks at their facility to relieve overvoltage and stability issues seen during low wind operation of GEN-2012-001. The study showed that the following line is not required to be accelerated from its need date (3/1/2018) for stability for the above Generation Interconnection Requests:

1. Grassland – Wolfforth 230kV ckt 1 (SPP-NTC-50404)

Grassland – Wolfforth 230kV ckt was accelerated in the original DISIS-2012-001 group 6 stability analysis since a higher queued project had a need for the upgrade.

The power factor analysis that was performed for Group 6 in DISIS-2012-001 remains valid. Therefore, a power factor analysis was not done for this study.

If any previously queued projects that were included in this study drop out, then this System Impact Study may have to be revised to determine the impacts of this Interconnection Customer's project on transmission facilities. In accordance with FERC and SPP procedures, the study cost for restudy shall be borne by the Interconnection Customer.
